The Innovators by Walter Isaacson - A 30-minute Summary 2014-10

please note this is a summary of the book and not the original book the innovators by walter isaacson a 30 minute summary inside this instaread summary overview of the entire book introduction to the important people in the book summary and analysis of all the chapters in the book key takeaways of the book a reader's perspective preview of this summary chapter 1 ada byron the daughter of poet lord byron was tutored in math by her mother as a result she grew up comfortable with the combination of art and science she met charles babbage a science and math expert babbage demonstrated a model of a machine that he built called a difference engine that could solve polynomial equations ada was inspired by babbage's difference engine and

decided to undertake advanced lessons in mathematics ada became interested in mechanical weaving looms that used punch cards to create patterns in fabric she recognized the similarity between the looms and babbage's difference engine ada married william king who became the earl of lovelace this made her ada countess of lovelace or more commonly ada lovelace babbage had an idea for another machine he wanted to create a computer that could carry out different operations he called his concept an analytical engine babbage wanted to use punch cards in his new machine similar to the ones used in looms ada lovelace believed in his idea and imagined that it might be used to process other symbolic notations such as for music and art in addition to numbers from 1842 to 1843 she wrote a translation of notes written by a young military engineer about the analytical engine her notes became more famous than the engineer's original article ada's notes covered four principles of historical significance the first was that this would be a multi purpose machine the second was that it could process and act upon anything that could be expressed in symbols the third was that the machine would work because of specific instructions given to it ada created this sequence of operations herself and wrote it up into a table and diagram her creation made her the world's first computer programmer the fourth concept ada wrote about was that computers could not think and could only perform as they were instructed babbage's machine was never built and ada never wrote another scientific paper but their ideas were the beginnings of the digital age that came a century later

j j abrams is one of the most successful director writer producers working in hollywood and now that he is being offered the chance to visit a galaxy far far away to direct the long awaited star wars sequel his reputation is set to shoot ever higher much like his hero steven spielberg such has been abrams success that he has himself become something of a brand especially since his popular revitalisation of star trek as producer of the 2009 blockbuster as well as its 2013 sequel star trek into darkness however in the early nineties abrams began his career writing relatively average movie scripts such as regarding henry and forever young before moving

into the world of tv with the college based drama *Felicity* it wasn't until the *Spy* series alias that his career truly launched since the early 2000s Abrams has dominated genre tv with the success of cult shows such as *Lost* and *Fringe* at the same time he found time for the big screen directing *Mission Impossible III* and his personal homage to Spielberg *Super 8* as well as producing the innovative monster movie *Cloverfield* then not content with distinction in these two fields 2013 saw the release of his first novel *S* with Doug Dorst while Abrams' sceptics note that not everything he has been involved with has worked after a number of his tv shows have been cancelled and some of his films have received mixed reviews there's no question that Abrams is one of Hollywood's most powerful people set to dominate the world of sf for years to come this is the first biography of the cult legend
