Although a number of edited collections deal with either the languages of the world or the languages of particular regions or genetic families, only a few cover sign languages or even include a substantial amount of information on them. This handbook provides information on some 38 sign languages, including basic facts about each of the languages, structural aspects, history, and culture of the deaf communities, and history of research. This information will be of interest not just to general audiences, including those who are deaf, but also to linguists and students of linguistics. By providing information on sign languages in a manner accessible to a less specialist audience, this volume fills an important gap in the literature.

The Anti HDR HDR Photography book contains everything you'll need to know in order to get the best results from your high dynamic range images. Designed for those who want to extend the dynamic range in their work but are frustrated by over-processed and hyper-saturated images, this book proves that HDR techniques are capable of producing photographs that are both stunning and realistic. In addition to helping you choose the right equipment and settings to optimize your shoot for HDR, the book explains how to use post-processing software to create natural-looking photographs, blend source images with layer masks, and establish an efficient workflow by teaching you to effectively use all the most important tools of HDR. It will expand the scope of your portfolio and allow you to create images that you never thought were possible. Key features include: what to look for when choosing a camera for HDR; description of gear that is important to the HDR photographer; how to use the HDR software applications Photomatix and SNS HDR Pro to achieve natural-looking results; discussion of blending multiple source images using simple masks and techniques; an in-depth examination of the use of luminance masks for blending and editing bracketed images to a photorealistic composite; guide to workflow from organizing images on the computer to pre-merge editing of raw files using both Adobe Lightroom and Adobe Bridge; the use of black and white in HDR and image blending, including ways to convert color images to black and white.
