in policing protest paul a passavant explores how the policing of protest in the united states has become increasingly hostile since the late 1990s moving away from strategies that protect protesters toward militaristic practices designed to suppress protests he identifies reactions to three interrelated crises that converged to institutionalize this new mode of policing the political mobilization of marginalized social groups in the civil rights era that led to a perceived crisis of democracy the urban fiscal crisis of the 1970s and a crime crisis that was associated with protests and civil disobedience of the 1960s as passavant demonstrates these reactions are all haunted by the figure of black insurrection which continues to shape policing of protest and surveillance notably in response to the black lives matter movement ultimately passavant argues this trend of violent policing strategies against protesters is evidence of the emergence of a post democratic state in the united states

humanoid robotics have made remarkable progress since the dawn of robotics so why don t we have humanoid robot assistants in day to day life yet this book analyzes the keys to building a successful humanoid robot for field robotics where collisions become an unavoidable part of the game the author

argues that the design goal should be real anthropomorphism as opposed to mere human like appearance he deduces three major characteristics to aim for when designing a humanoid robot particularly robot hands robustness against impacts fast dynamics human like grasping and manipulation performance instead of blindly copying human anatomy this book opts for a holistic design methodology it analyzes human hands and existing robot hands to elucidate the important functionalities that are the building blocks toward these necessary characteristics they are the keys to designing an anthropomorphic robot hand as illustrated in the high performance anthropomorphic awiwi hand presented in this book this is not only a handbook for robot hand designers it gives a comprehensive survey and analysis of the state of the art in robot hands as well as the human anatomy it is also aimed at researchers and roboticists interested in the underlying functionalities of hands grasping and manipulation the methodology of functional abstraction is not limited to robot hands it can also help realize a new generation of humanoid robots to accommodate a broader spectrum of the needs of human society

in the enchantments of technology lee worth bailey erases the conventional distinction between myth and machine in order to explore the passionate foundations concealed in technological culture and address its complex ethical moral and social implications bailey argues that technological society does not simply disenchant the world with its reductive methods and mechanical metaphors then shape machines with political motives but is also borne by a deeper subversive shipwreck at the bottom of the world the extraordinary true story of shackleton and the endurance

addressing examples to explore the complexities of these enchantments his thought is full of illuminating examinations of seductively engaging technologies ranging from the old camera obscura to new automobiles robots airplanes and spaceships this volume builds on the work of numerous scholars including jacques ellul and jean brun on the phenomenological and spiritual aspects of technology carl jung on the archetypal collective unconscious approach to myth and martin heidegger on being itself bailey creates a dynamic interdisciplinary postmodern examination of how our machines and their environments embody not only reason but also desires
