neurological and psychiatric disorders can occur in endocrine diseases either in the setting of the clinical manifestations of the same i e hyper or hyposecretion of hormones or peptides from the endocrine glands or as events secondary to the pathogenetic mechanisms of the endocrinopathy i e autoimmunity affecting endocrine glands and the brain also the medical or surgical treatment of the endocrine disease can sometimes determine the occurrence of neurological or psychiatric abnormalities moreover some genetic alterations can lead to syndromes affecting both the endocrine and the nervous system with a variety of possible manifestations in the last couple of decades a number of associations between dysfunctions of the endocrine system and neurological or psychiatric manifestations have appeared and only in the minority of the cases this link has been fully elucidated often the neurological or psychiatric alterations still represent a relevant challenge for clinicians with regard to the management of the patients the complexity of the topic and the limited availability of laboratory research models for the study of the endocrine system nervous system cross interaction are making the scientific progresses intricate and sometimes slow a dedicated focus to such broad and often still obscure topic might help and clarify the current state of the art in the field and direct the goals of future research

Maternal-Child Nursing - E-Book 2017-02-21 easily master maternity and pediatric nursing care with maternal child nursing 5th edition this easy to read text is filled with a wealth of user friendly features to help you quickly master essential concepts and skills it offers completely updated content including expanded information on the late preterm infant fetal heart rate pattern identification obesity in the pregnant woman and children and enhanced coverage of the qsen initiative it also features an abundance of active learning tools so you have ample opportunities to practice applying your knowledge and skills nursing care plans help you apply the nursing process to plan individualized care for the most common maternity and pediatric conditions critical to remember boxes summarize and highlight essential need to know information critical thinking exercises allow you to apply your knowledge to realistic clinical situations communication cues provide practical tips for effective verbal and nonverbal communication with patients and families clinical reference sections in pediatric chapters present information relevant to each body system including anatomy and physiology differences in the pediatric patient and related laboratory and diagnostic tests safety alerts call attention to important patient safety considerations for better outcomes of nursing care glossary at the end of the book offers quick access to all key terms and definitions presented in the text want to know boxes provide teaching guidelines such as communication guides directed at patients and families pathophysiology boxes present an illustrated overview of disorders updated drug guides summarize key medication information new completely updated content includes expanded information on the late preterm infant fetal heart rate pattern identification obesity

The Two-Way Link between Eating Behavior and Brain Metabolism

2016-01-13 this research topic collected and connected information concerning both the underlying metabolic mechanisms and consequences of eating behaviors these two aspects are tremendously important for a better understanding of eating behavior abnormalities as well as for improving education on eating disorders and behaviors

The Embodied Mind

2021-10-05 as groundbreaking synthesis that promises to shift our understanding of the mind brain connection and its relationship with our bodies we understand the workings of the human body as a series of interdependent physiological relationships muscle interacts with bone as the heart responds to hormones secreted by the brain all the way down to the inner workings of every cell to make an organism function no one component can work alone in light of this why is it that the accepted understanding that the physical phenomenon of the mind is attributed only to the brain in the embodied mind internationally renowned psychiatrist dr thomas r verney sets out to redefine our concept of the mind and consciousness he brilliantly compiles new research that points to the mind s ties to every part of the body the embodied mind collects disparate findings in physiology genetics and quantum physics in order to illustrate the mounting evidence that somatic cells not just neural cells store memory inform genetic coding and adapt to environmental changes all behaviors that contribute to the mind and consciousness cellular memory verney shows is not just an abstraction but a well documented scientific fact that will shift our understanding of memory verney describes single celled organisms with no brains demonstrating memory and points to the remarkable case of a french man who despite having a brain just a fraction of the typical size leads a normal life with a family and a job the embodied mind shows how intelligence and consciousness traits traditionally attributed to the brain alone also permeate our entire being bodily cells and tissues use the same molecular mechanisms for memory as our brain making our mind more fluid and adaptable than we could have ever imaged

Endocrine Pathology with Online Resource 2016-07-14 comprehensive and critical review of the current clinical radiologic biochemical molecular cytogenetic immunologic and histopathologic aspects of endocrine disorders
