understanding the array and complexity of instrumentation available to audiologists and hearing scientists is important to students beginning clinicians and even seasoned professionals the second edition of instrumentation for audiology and hearing science theory and practice is a comprehensive and accessible look at instrumentation used in these fields for research and clinical purposes the expert authors introduce the laws of physics as they relate to audiology and hearing science and explain a range of concepts in electronics directly related to instrumentation used in audiology and hearing science such as filtering and immittance involving admittance and impedance explain the fundamental instrumentation concepts in mathematics physics and electronics in a systematic manner including only the necessary formulae and basic scientific principles this

unique professional text presents the fundamentals of the evolution of communication systems from analog to digital including such concepts as digital signals sound resolution sampling quantization and their applications to current technology such as video calls and noise canceling head phones in addition the authors comprehensively cover calibration of test and research equipment and stimuli used in audiology and hearing science they also clearly describe elements of electronics and digital technology as they apply to our everyday lives and experiences as well as to the fields of audiology and hearing sciences new to the second edition new chapters on amplification assistive listening devices and vestibular assessment electronystagmography and videonystagmography geared toward audiology and hearing science students and professionals extensive reorganization for a smoother flow of information expanded focus on evidence based practice informed by the authors teaching research and clinical experiences the original chapters have either been eliminated or completely updated to reflect current scientific and clinical theories accompanying videos for the construction of direct and alternating current electrical circuits as well as the construction of high pass low pass and band pass filters
