john mcmurry s best selling text presents organic chemistry in a new edition that is up to date beautifully written visually striking and

~~pedagogically sound described by many of its users~~
as an eminently teachable text mcmurry sets the standard in the field the writing style has received almost universal acclaim from its users mcmurry introduces new concepts only as needed and immediately illustrates them with concrete examples and wherever possible he ties material together with brief reviews overviews and reaction summaries the result is a text that helps students mentally organize the material a text that helps them understand concepts not just memorize facts and a text that helps them make sense of the voluminous amount of material they encounter in the study of organic chemistry mcmurry uses a simple but important polar reaction the addition of hbr to an alkene as the lead off reaction to illustrate the general principles of organic reactions users of former editions found this an excellent choice because of its relative simplicity no prior knowledge of chirality or kinetics is required and its importance as a polar reaction on a common functional group that offers students the key to understanding hundreds of thousands of ionic reactions by selecting this particular model mcmurry is able to offer an unusually early presentation of organic reactions

excerpt from new methods in education art real manual training nature study this book is primarily a protest against present methods of education the old education is dependent too much upon books books are mere aids they are not the original sources of education or information but artificial and second hand ones nature and experience are the best teachers and by immediate acquaintance with and direct exercise upon the myriad forms of life we get the best training children are told too much they do not work out truths for themselves reading writing and arithmetic are made main facts instead of incidentals of education some pupils become exceptionally proficient in these branches at the expense of essentialities my endeavor will be to show that much school work should and can be carried on to better advantage as regards pupils teachers economy and environment by the method here set forth than by the ordinary system about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the

~~vast majority of imperfections successfully any~~
imperfections that remain are intentionally left
to preserve the state of such historical works
