edgar degas is famous for his paintings of ballerinas and that s what first attracts kristin to his artwork but as she studies him for her report she discovers that his art ranged far beyond the ballet and she gradually learns exactly what makes degas s work so unique he addressed the routine of the practice room the drabness of backstage life the moment of transformation as performers left or entered the stage and the squalid amorous adventures between the ballerinas and the black suited top hatted and often sinister gentlemen who sought their favors after a performance presents 2000 years of art history through a series of paintings of dancers and the dance the emergence of modern dance and the early history of cinema ran concurrent with the european avant garde s development of pictorial abstraction in the first decades of the 20th century however many assume that modernist abstraction resulted from a century of natural autonomous evolution to painting styles and tastes in moving modernism author nell andrew challenges this assumption by examining dance and film created during this period she argues that performative modes of art created the link between bodily movement and movement depicted in modernist paintings in a seeming paradox dance and film durational arts involving real bodies in space participated in the development of abstract art with archival material collected in north america and europe moving modernism resurfaces lost performances identifies working methods and establishes the circles of aesthetic influence and reception for avant garde dance pioneers and experimental film makers from the turn of the century to the interwar period reexamining the motivation that fueled the emergence of abstraction andrew claims that painters sought meaning not only in the material and formal picture but also in temporal and sensorial experience andrew looks at major figures and intellectual movements including loïe fuller and symbolism valentine de saint point and the cubo futurist and neo symbolist movements and early cinematic abstraction from edison and the lumières to hans richter and marcel duchamp close examinations of each figure show that theatrical display embodied self projection and kinesthetic desire are not necessarily in opposition to pictorial abstraction in fact they expand our understanding of the urges that created
