major changes have occurred in the last few years in the methods of cutting and manufacturing outerwear light clothing companies are now manufacturing these heavy garments because of the development of fusible interlinings and new manufacturing techniques which have resulted in the deskilling of traditional tailoring methods outerwear has consequently assumed much greater importance in light clothing courses and this book the first of its kind has been written to reflect these industrial changes it offers a course of practical and theoretical study which is related to specific garment types and fabrics an essential manual for students at every level suitable for use in cgli btec and degree courses this uniquely comprehensive work is certain to become a standard textbook on its subject

metric pattern cutting for women s wear provides a straightforward introduction to the principles of form pattern cutting for garments to fit the body shape and flat pattern cutting for casual garments and jersey wear this sixth edition remains true to the original concept it offers a range of good basic blocks an introduction to the basic principles of pattern cutting and examples of their application into garments fully revised and updated to include a brand new and improved layout up to date skirt and trouser blocks that reflect the changes in body sizing along with updates to the computer aided design section and certain blocks illustrations and diagrams this best selling textbook still remains the essential purchase for students and beginners looking to understand pattern cutting and building confidence to develop their own pattern cutting style

The Problem of Dark-Cutting in Beef

the last three decades have witnessed a proliferation of ngos engaging in new campaigns to end the practice of female genital cutting across africa these campaigns have in turn spurred new institutions discourses and political projects bringing about unexpected social transformations both intended and unintended consequently cutting is waning across the continent at the same time these endings are

being disavowed by cross continental discourses that argue that cutting has become an object of a neocolonial racist gaze and western interventionist zeal what does it mean to say that while cutting is ending the western discourse surrounding it is on the rise and what kind of a feminist anthropology is needed in such a moment the twilight of cutting examines these and other questions from the vantage point of ghanaiian feminist and reproductive health ngos that have organized campaigns against cutting for over thirty years the book looks at these ngos not as solutions but as sites of problematization the purpose of understanding ghanaiian campaigns their transnational and regional encounters and the forms of governmentality they produce is not to charge them with providing answers to the question how do we end cutting instead it is to account for their work their historicity the life worlds and subjectivities they engender and the modes of reflection imminent critique and opposition they set in motion provided by publisher

interest in ceramics as a high speed cutting tool material is based primarily on favorable material properties as a class of materials ceramics possess high melting points excellent hardness and good wear resistance unlike most metals hardness levels in ceramics generally remain high at elevated temperatures which means that cutting tip integrity is relatively unaffected at high cutting speeds ceramics are also chemically inert against most workmetals
