surviving arrogance by s david nathanson this memoir shows how an arrogant surgeon whose worldview was entirely dependent upon scientific dogma was startled into a new way of thinking a new way of understanding himself his patients and the world and how he became grateful more human more compassionate and more creative enhancing his ability to heal patients with potentially lethal cancers and to use his creative research thoughts to introduce new ideas into his profession the key to his transformation was provided by a young woman dying of a rare abdominal tumor but who miraculously survived after aggressive western style treatment she believed the most important part of her treatment and recovery was the mindset she developed from alternative non medical treatments and he initially skeptical of her beliefs discovered truths that his medical training had not taught him the author hopes that readers will see how modern medicine can and should incorporate empathy from doctors for their patients and a belief that they are not superior despite their more advanced education
