monty rosenberg was a sublimely and ruthlessly selfish man who gave joy to others by accident pursuing all the while his own luxurious aims from the day of his birth until this lamentable evening in september he had never wished to benefit anybody but himself he lived to and for himself and this beautiful home had been made for his own delight and yet the inscrutable ways of life had performed a seeming miracle and monty was tonight a mere voiceless child obeying the decrees of circumstance he was preparing to entertain his guests in a mood of solemn and magistral calm he thought nothing at all of their pleasure or their envy he was as much above snobbery as he was below compassion but he had created an atmosphere of gorgeous appropriateness to the marvels of the human heart and the gloomy night furnished a contrast as violent as the most emotional person in the world could have desired he had prepared a stir of color which must affect all those who were to be present upon this occasion unusual among shakespeare s plays in that it drew theatrical responses from the outset the taming of the shrew continues to inspire adaptations and interpretations that respond to its fascinating if provocative representation of a husband s dominance of his wife this annotated collection of three early modern english plays allows readers to explore the relationship between shakespeare s shrew and two closely related plays of the same genre the earlier of which the anonymous the taming of a shrew whether inspired by shakespeare s play or vice

versa once enjoyed a level of popularity that likely surpassed that of shakespeare s play the editors introduction brilliantly illuminates points of comparison between the three their larger themes included and convincingly argues that shakespeare s shrew is seen all the more vividly when the anonymous a shrew and fletcher s table turning the tamer tamed are waiting in the wings the central theme of this book is national land and infrastructure design in the age of the declining population and the recovery from the great east japan earthquake in the affected regions in japan based on the theory of spatial economics and evidence from japanese history the authors show that the growing economy with a population increase develops into a multi cored and complex structure in the population decline phase however such construction will be destabilized because of agglomeration economies in the central core then a catastrophic shock that strikes may provoke the decline of the lower rank size provincial cities and their eventual disappearance if they compete only in lower prices of staple products not only is the practice bad for the residents it also leads to lower national welfare resulting from the loss of diversity and overcrowded big cities the authors argue that small local towns can recover and will be sustained if they will endeavor in innovative production by making good use of local natural resources and social capital under the ongoing declining population in japan an undesirable concentration in tokyo will proceed further with increasing social cost and risk the recent novel coronavirus pandemic has highlighted that concern an overview of statistical methods for analyzing data from fmri experiments functional magnetic resonance imaging fmri which allows researchers to observe neural activity in the human brain noninvasively has revolutionized the scientific study of the mind an fmri experiment produces massive amounts of highly complex data researchers face significant challenges in analyzing the data they collect this book offers an overview of the most widely used statistical methods of analyzing fmri data every step

from preprocessing to advanced methods for assessing functional connectivity the goal is not to describe which buttons to push in the popular software packages but to help readers understand the basic underlying logic the assumptions the strengths and weaknesses and the appropriateness of each method the book covers all of the important current topics in fmri data analysis including the relation of the fmri bold blood oxygen level dependent response to neural activation basic analyses done in virtually every fmri article preprocessing constructing statistical parametrical maps using the general linear model solving the multiple comparison problem and group analyses the most popular methods for assessing functional connectivity coherence analysis and granger causality two widely used multivariate approaches principal components analysis and independent component analysis and a brief survey of other current fmri methods the necessary mathematics is explained at a conceptual level but in enough detail to allow mathematically sophisticated readers to gain more than a purely conceptual understanding the book also includes short examples of matlab code that implement many of the methods described an appendix offers an introduction to basic matlab matrix algebra commands as well as a tutorial on matrix algebra a second appendix introduces multivariate probability distributions in june of 1940 when paris fell to the nazis hitler spent a total of three hours in the city of light abruptly leaving never to return to this day no one knows why kate rees a young american markswoman has been recruited by british intelligence to drop into paris with a dangerous assignment assassinate the führer wrecked by grief after a luftwaffe bombing killed her husband and infant daughter she is armed with a rifle a vendetta and a fierce resolve but other than rushed and rudimentary instruction she has no formal spy training thrust into the red hot center of the war a country girl from rural oregon finds herself holding the fate of the world in her hands when kate misses her mark and the plan

the central theme of this book is national land and infrastructure design in the age of the declining population and the recovery from the great east japan earthquake in the affected regions in japan based on the theory of spatial economics and evidence from japanese history the authors show that the growing economy with a population increase develops into a multi cored and complex structure in the population decline phase however such construction will be destabilized because of agglomeration economies in the central core then a catastrophic shock that strikes may provoke the decline of the lower rank size provincial cities and their eventual disappearance if they compete only in lower prices of staple products not only is the practice bad for the residents it also leads to lower national welfare resulting from the

loss of diversity and overcrowded big cities the authors argue that small local towns can recover and will be sustained if they will endeavor in innovative production by making good use of local natural resources and social capital under the ongoing declining population in japan an undesirable concentration in tokyo will proceed further with increasing social cost and risk the recent novel coronavirus pandemic has highlighted that concern
