Making Sense of Word Problems **2000-01-01**

word problems have been a staple of mathematics instruction for centuries yet the rationale for their use has remained largely unexamined a range of findings have shown how students consistently answer them in ways that fail to take account of the reality of the situations described this monograph reports on studies carried out to investigate this suspension of sense making in answering word problems in part one a wide range of examples documenting the strength of the phenomenon is reviewed initial surprise at the findings was replaced by a conviction that the explanation lies in the culture of the mathematics classroom specifically the rules implicitly governing the nature and interpretation of the word problem genre this theoretical shift is reflected in part two a detailed analysis of the way in which word problems are currently taught in typical mathematical classrooms is followed by reviews of design experiments illustrating how by immersing students in a fundamentally changed learning environment they can acquire what the authors consider to be more appropriate conceptions about and strategies for doing word problems part three turns to

question in this volume a lion can live up to 40 years
and an elephant can live twice as long if a sea turtle
can live 20 years more than twice as long as the
elephant how many years can the sea turtle live up to
reasoning and solution twice 2 groups of so we can use
the 3 elements formulas to solve for one of the
elements an elephant can live twice as long as a lion
40 years so the number of years that a lion can live to
is the amount in 1 group the number of groups is 2 we
multiply the number of groups 2 with the amount in each
group 40 years to find the total amount in the groups
or the number of years that the elephant can live up to
 $2 \times 40 = 80$ years a sea turtle can live up to 20 years
more than twice as long as the elephant we need to
first find the amount that is twice as much as the
elephant s age the amount in 1 group is the age of the
elephant the number of groups is 2 twice 2 groups of so
we can use the 3 elements formulas to solve for one of
the elements we multiply the number of groups 2 with
the amount in each group 80 to find total amount in the
groups $2 \times 80 = 160$ years secondly we need to find 20
years more than twice as long as the elephant 160 years
