this text presents the basic concepts of modern cognitive psychology in a succinct and accessible manner empirical results theoretical developments and current issues are woven around basic concepts to produce coherent accounts of research areas barsalou's primary goal is to equip readers with a conceptual vocabulary that acquaints them with the general approach of cognitive psychology and allows them to follow more technical discussions elsewhere in meeting this goal he discusses the traditional work central to modern thinking and reviews current work relevant to cognitive science besides focusing on research and theory in cognitive psychology barsalou also addresses its fundamental assumptions because the cognitive approach to psychology is somewhat subtle often misunderstood and sometimes controversial it is essential for a text on cognitive psychology to address the assumptions that underlie it therefore three of the eleven chapters address the meta assumptions that govern research and theory in cognitive psychology these meta chapters provide a deeper understanding of the content areas and a clearer vision of what cognitive psychologists are trying to accomplish the remaining eight content chapters cover the central topics in cognitive psychology this book will be of value to a variety of audiences ideal for researchers in computer science linguistics philosophy anthropology and neuroscience who wish to acquaint themselves with cognitive psychology it may also be used as a text for courses in cognitive science and cognitive psychology lay readers who wish to learn about the cognitive approach to scientific psychology will also find the volume useful

cognitive psychology is concerned with several mental processes including those involved in perception attention learning memory problem solving decision making and the use of language it is often said that cognitive psychology

tries to understand how people represent their experience and then use these representations to operate effectively cognitive psychology holds that people are not passive organisms whose mental representations are simple or direct reflections of the outside world rather they are active processors of environmental events and as such they bring their past knowledge and their biases to bear on how they perceive and understand all current events thus perceiving imagining thinking remembering forming concepts and solving problems indeed all aspects of people's mental lives define the domain of cognitive exploration this book presents important research which was carefully selected and screened for both current relevance and long term advancement of the field
