useful for understanding the ethical cultural and societal dimensions of anthropogenic global changes geoethics identifies and orients responsible behaviors and actions in the management of natural processes redefining the human interaction with the earth system based on a critical scientifically grounded and pragmatic approach solid scientific knowledge and a philosophical reference framework are crucial to face the current ecological disruption the scientific perspective must be structured to help different human contexts while respecting social and cultural diversity it is impossible to respond to global problems with disconnected local actions which cannot be proposed as standard and effective operational models geoethics tries to overcome this fragmentation presenting earth sciences as the foundation of responsible human action toward the planet geoethics is conceived as a rational and multidisciplinary language that can bind and concretely support the international community engaged in resolving global environmental imbalances and complex challenges which have no national cultural or religious boundaries that require shared governance geoethics is proposed as a new reading key to rethinking the earth as a system of complex relationships in which the human being is an integral part of natural interactions

Geoethics? 2022-04-12

Geoethics is a new field of research that seeks to integrate the ethical, cultural, and societal dimensions of anthropogenic global changes. It identifies and orients responsible behaviors and actions in the management of natural processes, redefining the human interaction with the earth system based on a critical, scientifically grounded, and pragmatic approach. Solid scientific knowledge and a philosophical reference framework are crucial to face the current ecological disruption. The scientific perspective must be structured to help different human contexts while respecting social and cultural diversity. It is impossible to respond to global problems with disconnected local actions which cannot be proposed as standard and effective operational models. Geoethics tries to overcome this fragmentation, presenting earth sciences as the foundation of responsible human action toward the planet. Geoethics is conceived as a rational and multidisciplinary language that can bind and concretely support the international community engaged in resolving global environmental imbalances and complex challenges which have no national, cultural, or religious boundaries that require shared governance. Geoethics is proposed as a new reading key to rethinking the earth as a system of complex relationships in which the human being is an integral part of natural interactions.

Media and information literacy curriculum for teachers 2000-11-01

Media and information literacy (MIL) is a set of skills and competencies that enable individuals to access, analyze, evaluate, and create media and information. It is a critical skill for the 21st century, as individuals are increasingly exposed to a wide range of media and information. The curriculum for teachers focuses on developing these skills and competencies in a way that is relevant to the classroom. It includes topics such as digital literacy, critical thinking, and media analysis. The curriculum is designed to be flexible and adaptable to different teaching environments and student needs.

Geoethics 1989-04-10
