functional neuroanatomy cambridge advance online Mar 18 2024 identify map and label key functional structures and pathways in the brain recognise analyse and interpret microscopic brain structure identify sites of injury based on clinical signs and symptoms brain images and patient history

the brain an introduction to functional neuroanatomy pmc Feb 17 2024 first it explains the different types of the nerve cells and synapses followed by the most common neurotransmitters then it explains the animal brain and spinal cord followed by a map of the brain consequently peripheral nerves both spinal and cranial nerves are explained brain spinal cord and peripheral nervous system anatomy kenhub

anatomy kenhub Jan 16 2024 a neuron nerve cell is the functional unit of the nervous system they receive and transmit neural impulses meaning that neurons

process and integrate information from all regions of the body and send instructions on how body tissues are to respond to environmental and internal events

neurons are the basic functional units of the nervous system and they generate electrical signals called action potentials which allow them to quickly

transmit information over long distances glia are also essential to nervous system function but they work mostly by supporting the neurons
