history from 1861 to 1863 the corps contributed invaluable surveillance and reconnaissance information to the union army's war effort during the virginia campaign it also accomplished such significant military feats as the initial air to ground communication by telegraph the first use of the aircraft carrier for launch of the balloon and the first artillery barrage directed by an aerial observer where gun batteries were unable to see their targets from the ground this book traces the history of the intrepid airborne force from its creation by pioneer balloonist thaddeus lowe to its unceremonious disbanding in 1863

in the 21st century the age of the budget airline where quick and reliable air travel is available to a large segment of society it seems hard to comprehend that it is less than 250 years since the first human took to the skies although the wing of the bird seemed like the most obvious natural mechanism to attempt replicate it was actually contained hot air as demonstrated by the montgolfiers and their balloon that gave birth to the era human aviation since the first manned balloon flight in 1783 developments have come thick and fast the airship the aeroplane and finally the space shuttle this reprint of a classic publication from 1879 contains a wealth of fascinating information on the early history of aviation complete with illustrations and a brand new introduction it covers the adventures of the great aeronauts such as coxwell and rozier and famous ascents like that of the zenith this is a wonderful work for anyone with an interest in the technology and events that defined the lighter than air period of aeronautics
