the phenomenal growth of global pharmaceutical sales and the quest for innovation are driving an unprecedented search for human test subjects particularly in middle and low income countries our hope for medical progress increasingly depends on the willingness of the world's poor to participate in clinical drug trials while these experiments often provide those in need with vital and previously unattainable medical resources the outsourcing and offshoring of trials also create new problems in this groundbreaking book anthropologist adriana petryna takes us deep into the clinical trials industry as it brings together players separated by vast economic and cultural differences moving between corporate and scientific offices in the united states and research and public health sites in poland and brazil when experiments travel documents the complex ways that commercial medical science with all its benefits and risks is being integrated into local health systems and emerging drug markets providing a unique perspective on globalized clinical trials when experiments travel raises central questions are such trials exploitative or are they social goods how are experiments controlled and how is drug safety ensured and do these experiments help or harm public health in the countries where they are conducted empirically rich and theoretically innovative the book shows that neither the language of coercion nor that of rational choice fully captures the range of situations and value systems at work in medical experiments today when experiments travel challenges conventional understandings of the ethics and politics of transnational science and changes the way we think about global medicine and the new infrastructures of our lives

Textbook of Personalized Medicine 2015-03-17

this comprehensive text presents a rigorous framework from within which regulators can respond strategically to the claim by the pharmaceutical industry that lower drug prices today lead to a loss for the population s future health due to less innovation it starts with a critical review

of the empirical evidence of the return to consumers on their ongoing investment into high drug prices in order to increase future innovation the implicit critical and unrealistic assumption inherent in these studies is identified namely that the health budget can be expanded to purchase drugs at higher prices without an opportunity cost for example the foregone benefits of alternative investments in health care infrastructure price effectiveness analysis pea is introduced pea informs the question of how the innovative surplus from the new drug should be allocated between the manufacturer and the consumer so as to optimise society's welfare the method allows the decisions by the regulator and the firm to be analysed jointly by specifying the firm's production and revenue functions in terms of the clinical innovation of a new drug the incremental effect used in the summary metric of cost effectiveness analysis an economic value of innovation that takes into account opportunity cost under conditions of economic efficiency in the health system is proposed the health shadow price the limitations of the non strategic methods that currently inform the highly contested new drug subsidy game are presented and the relative strengths of pea are demonstrated health technology assessment quantifies both the clinical innovation of a new drug and its financial impact on the health system cost effectiveness analysis tests the relationship between the incremental cost and incremental effect of a new drug for target patients at a given price pea tests the relationship between the price of a new drug and the health of the whole population now and into the future it achieves this by taking into account current inefficiency in both resource allocation and the displacement process and the relationship between price and future innovation
