2019-07-26

in how machines came to speak jennifer petersen constructs a genealogy of how legal conceptions of speech have transformed over the last century in response to new media technologies drawing on media and legal history petersen shows that the legal category of speech has varied considerably evolving from a narrow category of oratory and print publication to a broad abstract conception encompassing expressive nonverbal actions algorithms and data she examines a series of pivotal us court cases in which new media technologies such as phonographs radio film and computer code were integral to this shift in judicial decisions ranging from the determination that silent films were not a form of speech to the expansion of speech rights to include algorithmic outputs courts understood speech as mediated through technology speech thus became disarticulated from individual speakers by outlining how legal definitions of speech are indelibly dependent on technology petersen demonstrates that future innovations such as artificial intelligence will continue to restructure speech law in ways that threaten to protect corporate and institutional forms of speech over the rights and interests of citizens

MAEDA@MEDIA

1990

only recently has the phenomenon of technology become an object of in terest for philosophers the first attempts at a philosophy of technology date back scarcely a hundred years a span of time extremely short when com pared with the antiquity of philosophical reflections on nature science and society over that hundred year span speculative critical and empiricist approaches of various sorts have been put forward nevertheless even now there remains a broad gap between the importance of technology in the real world and the sparse number of philosophical works dedicated to the under standing of modern technology as a result of the complex structure of modern technology it can be dealt with in very different ways these range from metaphysical exposition to efforts aimed at political consensus quite naturally within such a broad range certain national accents can be discovered they are shaped by a com mon language accepted philosophical traditions and concrete problems requiring consideration even so the worldwide impact of technology its penetration into all spheres of individual social and cultural life together with the urgency of the problems raised in this context all these demand a joint philosophical discussion that transcends the barriers of language and cultural differences the papers printed here are intended to exemplify such an effort at culture transcending philosophical discussion
