at a time when the world is grappling with rising food and energy prices and climate change living in a material world provides an insight into some of the contributing factors behind these challenges the emergence of new consumers in china india russia and the middle east has added formidable competition to the natural resources that have been taken for granted in the developed world everything we consume involves the use of metals fossil fuels or agriculture our high tech lifestyles depend on the secure supply of these raw materials which we take from planet earth and use to make our lives more comfortable more productive or more manageable the effect of this increasing global demand for commodities has pushed up prices of materials from oil and copper to corn and wheat forcing consumers to pay more for the many necessities of life from a loaf of bread to electricity bills since the commodity boom has unfolded commodities have gone from the back page of the newspaper to the front with more and more headlines about record food and oil prices dire climate change warnings energy security and china s demand for more raw materials this era of high oil and food prices is no passing phase the supply of many key natural resources is stretched to the limit but what is the real cost living in a material world makes the link between raw materials and the consumer and shows how they are relevant to everybody everyday now more so than at any time since the last oil shock nearly three decades ago a unique insight into this once in a generation boom the book shows

how the increasing value of commodities is impacting on consumers and investors in ways we are only just beginning to understand it was a great pleasure to read this book which provides an essential background to understanding commodities for anybody interested in understanding them more closely it is so rare to see all the essential elements brought together in one book chris brodie krom river partners llp kevin morrison set out to write a book about the daily relevance that raw materials have for the ordinary consumer he has achieved his objective par excellence the subject matter has been comprehensively researched and well documented yet the writer has avoided using complicated technical language the style of the book is more in tune with a novel and the main topics are treated with a special sense of humour i would readily recommend this work to anyone interested in how global energy issues have a direct affect on us all mehdi varzi president varzi energy london

modern economic writings do not possess a correct theory of rent arising specifically from ownership of landed property this conceptual famine has seriously affected the analysis of agriculture in developing economies where agriculture employs two thirds of the work force and where three fifths of the land is owned by less than a tenth of the landowners it also hampers us in understanding the agrarian crisis that is engulfing many countries of the third world the selection of readings put together in this volume is in three parts the first part deals with marx's

writings on pre capitalist relationships and that aspect of the primitive accumulation of capital which relates to the formation of a propertyless labour force the second part is devoted to the marxist theory of rent in particular to understanding the crucial distinction made by marx between what he termed absolute ground rent and ricardo s concept which he termed differential rent the third part relates to the process of capitalist development in agriculture and the formation of a class of capitalist producers he editor s erudite and lucid introduction lays out the terrain of the argument and makes marx s theory of rent more accessible and comprehensible to the lay reader
