induction motor im is a type of ac electric motor in which the electric current in the rotor that produces torque is obtained by electromagnetic induction from the magnetic field of the stator winding.

induction motor definition an induction motor is an ac electric motor where torque is generated through electromagnetic induction from the stator's rotating magnetic field to the rotor working principle induction motors operate on the principle where an alternating current induces a magnetic field in the stator which then induces

induction motor im is a type of asynchronous motor that is widely used in industry and household appliances. It consists of a stator and a rotor. The stator is connected to an AC power source, and the rotor is connected to a closed circuit. The interaction between the magnetic fields of the stator and the rotor produces torque, causing the motor to rotate.
