Thermal Methods in Petroleum Analysis

2008-07-11

this exceptional book reveals the results of twelve years of extensive thermoanalytical investigations into petroleum and its products with the aid of 236 tables 284 diagrams and 159 references firstly the methods employed in obtaining thermoanalytic data in particular thermogravimetry differential thermal analysis and differential scanning calorimetry are presented and the underpinning theory described next the data obtained from model substances i e pure hydrocarbons is displayed it is then explained how multicomponent hydrocarbon systems may be characterized by comparison of their data with this research into petroleum and its products using these methods is outlined the reactions central to various refinery processes tertiary oil recovery lubricant stability testing and oil shale retorting to name but a few examples are investigated as are relevant pyrolysis and oxidation reactions finally readers are brought up to date with recent developments in instrumentation are recommended hardware and software and are provided with a list of suppliers scientists engineers and technicians working on research product characterization process development or quality control in the oil recovery oil refining petrochemical lubricant and asphalt industries will find the advice and information in this book to be of great value
