bacterial distribution and antibiotic resistance in respiratory system infections among the elderly in china a 16 year surveillance study abstract am j respir crit care med 2024 209 a2928 in china nosocomial infection is a prominent public health concern and is associated with an annual direct economic burden of 1 5 2 3 billion 10 15 billion 1 advances in medical technology extensive application of novel diagnostic and therapeutic techniques and increased adoption of traumatic and invasive interventions have respiratory tract infection 43 80 accounted for the most substantial proportion of hais followed by bloodstream infections 15 74 and urinary tract infection 12 69 a summer peak in hais was detected among adult and elderly patients the personalized medicine with tcm exerts a curative effect on viral and bacterial infectious diseases with unique advantages on the improvement of clinical manifestation pathogen inhibition and organ recovery during severe and drug resistant infection the most common infections were respiratory system infection 52 22 bloodstream infection 17 60 and genitourinary system infection 15 62 acinetobacter baumannii 9 6 klebsiella pneumoniae 9 0 pseudomonas aeruginosa 8 6 escherichia coli 8 6 and enterococcus faecium 5 0 were the top five isolated pathogens in 2006 the five most frequently reported infectious diseases in china were tuberculosis hepatitis b dysentery syphilis and gonorrhoea accounting for 3 963 663 of 4 608 910 86 reported cases of the 27 notifiable infectious diseases surgical site infections ssi are a common type of healthcare associated infection we performed a literature review to demonstrate the incidence of ssi in mainland china based on studies since 2010 china s cdc system has progressed remarkably enabling quicker responses to emergent epidemics future challenges include establishing a sustainable financing mechanism and retaining a well educated adequately sized public health workforce the ecological interaction of people with animals in china favours the emergence of new microbial threats the public health system has to be prepared to deal with the challenges of newly emerging infectious diseases and at the same time try to control existing diseases changes in notifiable infectious disease incidence in china during the covid 19 pandemic meng jie geng hai yang zhang lin jie yu chen long lv tao wang tian le che qiang xu bao gui modernising infectious disease surveillance and an early warning system the need for china s action lancet reg health west pac 2022 jun 6 23 100485 doi 10 1016 j lanwpc 2022 100485 ecollection 2022 jun authors lei xu 1 2 cui zhou 1 sitong luo 1 2 daniel kam chan 3 mary louise mclaws 4 wannian liang 1 2 affiliations abstract background identifying the causative pathogens of central nervous system infections cnsis is crucial but the low detection rate of traditional culture methods in cerebrospinal fluid csf has made the pathogenic diagnosis of cnsis a longstanding challenge control of infectious disease challenges to china s public health system the 2003 sars breakout in china forcefully demonstrated the global importance of controlling for infectious diseases this paper reviews major problems in china s public health system and in its ability to deal with a biomedical threat such as an influenza pandemic infectious disease surveillance and early warning requires the close collaboration of the whole community a comprehensive system will lead to efficient use of health resources rapid decision making timely and accurate prevention and control as well as orderly responses to future outbreaks uti s typically occur when bacteria enter the urinary tract through the urethra and begin to spread in the bladder the urinary system is designed to keep out bacteria but the defenses sometimes fail when that happens bacteria may take hold and grow into a full blown infection in the urinary tract the most common uti s occur mainly in women the national epidemiological surveillance of infectious diseases is conducted for the purpose of grasping and analyzing the incidence of infectious diseases providing information to prevent the incidence and spread of infectious diseases sore throat stuffy or runny nose diarrhoea feeling sick or being sick if you are feeling unwell with these symptoms you should get plenty of rest and drink water to keep hydrated you can use there are over 100 known autoimmune diseases common ones include lupus rheumatoid arthritis crohn s disease and ulcerative colitis autoimmune diseases can affect many types of tissues and nearly any organ in your body they may cause a variety of symptoms including pain tiredness fatigue rashes nausea headaches dizziness and more friday april 3 2020 a further 89 people were confirmed to be infected with the coronavirus on friday in tokyo and it s fueling concerns about the capacity of the capital s healthcare system tokyo july 21 reuters japanese health experts said on wednesday there were concerns that rising covid 19 cases in tokyo could add to the burden on the medical system and create delays in
