the building of the berlin wall in 1961 shocked the world ever since the image of this impenetrable barrier between east and west imposed by communism has been a central symbol of the cold war based on vast research in untapped archival oral and private sources burned bridge reveals the hidden origins of the iron curtain presenting it in a startling new light historian edith sheffer s unprecedented in depth account focuses on burned bridge the intersection between two sister cities sonneberg and neustadt bei coburg germany s largest divided population outside berlin sheffer demonstrates that as soviet and american forces occupied each city after the second world war townspeople who historically had much in common quickly formed opposing interests and identities the border walled off irreconcilable realities the differences of freedom and captivity rich and poor peace and bloodshed and past and present sheffer describes how smuggling kidnapping rape and killing in the early postwar years led citizens to demand greater border control on both sides long before east germany fortified its 1 393 kilometer border with west germany it was in fact the american military that built the first barriers at burned bridge which preceded east germany s

borderland crackdown by many years indeed sheffer shows that the physical border between east and west was not simply imposed by cold war superpowers but was in some part an improvised outgrowth of an anxious postwar society ultimately a wall of the mind shaped the wall on the ground east and west germans became part of and helped perpetuate the barriers that divided them from the end of world war ii through two decades of reunification sheffer traces divisions at burned bridge with sharp insight and compassion presenting a stunning portrait of the cold war on a human scale

from cultural studies sociology media studies gender studies and elsewhere there have been a spate of books recently which have attempted to characterize the state of modernity many of these have also argued that what is required is an ethnographic work to determine how far these supposed trends actually apply to a given population this book explicitly accepts this challenge and in so doing demonstrates the potential of modern anthropology studies it starts by summarizing some debates on modernity and then argues that the caribbean island of trinidad is particularly apt for such a study given the origins of its population in slavery and indentured labour both forms of extreme social rupture the particular focus of this book is on mass consumption and the way goods and imported images such as soap opera have been used to express and develop a number of key contradictions of modernity it will be of interest to anthropologists looking for a new potential for the discipline as well as students in other fields who will be interested in the new contribution of anthropology to their debates
