excerpt from guide to the study of animal ecology during the past ten years the writer has been trying to find some consistent and satisfactory working plan for handling the almost bewildering number of facts of ecological significance which have been accumulating in the literature of zoology biology and the allied sciences this book is the outgrowth of the effort as it has developed in the study and teaching of animal ecology i have not attempted to make this an exhaustive treatment of the subject but rather to indicate briefly some of its general bearings and a method of approach i have tried to keep in mind the needs of the beginner in ecology an ecological point of view is described more fully than the other subjects discussed so that the student may see the need of familiarity with those tests or criteria by means of which he may be able to determine for himself ecological relations and the validity of ecological studies the other phases are treated less fully in the discussions and with more detail bibliographically so that this may be a useful source book the geographical in the ordinary sense of the word aspect has been deliberately omitted about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
