timely information access the information you need easily and rapidly with new succinct chapter summaries that include diagnosis therapy and prevention experience clinical scenarios with vivid clarity through a richly illustrated full color format that includes 1500 photographs for enhanced visual guidance silvicultural practices in the douglas fir region evolved through a combination of formal research observation and practical experience of forest managers and silviculturists and changing economic and social factors this process began more than a century ago and still continues it has had a great influence on the economic well being of the region and on the present characteristics of the regions forests this long history is unknown to most of the public and much of it is unfamiliar to many natural resource specialists outside and even within the field of silviculture we trace the history of how we got where we are today and the contribution of silvicultural research to the evolution of forest practices we give special attention to the large body of information developed in the first half of the past century that is becoming increasingly unfamiliar to both operational foresters and perhaps more importantly to those engaged in forestry research we also discuss some current trends in

silviculture and silviculture related research in addition to a thoughtful selection of the essays speeches and autobiographical writings of frederick douglass this anthology provides an illuminating introduction a timeline of douglass life footnotes that introduce individuals quotations and events and a selected bibliography westpro is an add in program designed to work with microsoft excel to simulate the growth of uneven aged douglas fir pseudotsuga menziesii mirb franco stands in the pacific northwest region of the united states given the initial stand state defined as the number of softwood and hardwood trees per acre by diameter class westpro predicts the future stand state for each year of a predetermined time horizon management regimes are defined by a target stand distribution and a cutting cycle performance indicators include diversity of tree size and species timber yield and net present value of harvest over the given horizon this paper contains background information on the westpro program and instructions and suggestions for its application by working the examples found in the text the user will learn how to simulate the growth of a given initial stand and to predict how different management regimes may affect stand structure yield and diversity limitations of the model also are discussed discusses defining moments in american history this volume is a collection of the writings of douglas helms on topics ranging from the history of the cotton boll weevil and the soils of the south to the history of soil and water conservation programs in the united states they were authored over a more than thirty year career as a historian in the public service at the national archives and the u s department of agriculture soil conservation service and natural resources conservation service what makes a good manager though we can probably all point to someone we think of as a good manager what precisely makes them so good at their job is a complex question and one central to good business organization management scholar douglas mcgregor s seminal 1960 book the human side of enterprise is perhaps the most influential attempt to answer that question and provides an excellent example of strong evaluative and reasoning skills in action evaluation is all about judging the strength and weakness of positions a critical evaluation asks how acceptable a line of reasoning is how adequate relevant and convincing the evidence is mcgregor sought to find out what makes a good manager by evaluating different management approaches their assumptions about human behavior and effects they had in his view management approaches could be roughly broken down into two theories theory x which held a negative idea of employee motivations and theory y which made positive assumptions about them in mcgregor s evaluation theory y produced markedly better results in productivity and other measurable areas on this basis mcgregor reasoned out a strong persuasive argument for adopting theory y strategies on a grand scale this is the first full length account of the life and ideas of mary douglas the british social anthropologist whose publications span the second half of the twentieth century richard fardon covers douglas family background and the pervasive influence of her catholic faith on her writings before providing an analysis of two of her most influential works purity and danger 1966 and natural symbols 1970 the final section deals with douglas more controversial writings in the fields of economics consumption religion and risk analysis in contemporary societies throughout fardon highlights the centrality of douglas role in the history of anthropology and the discipline s struggle to achieve relevance to contemporary western societies this report describes the origin design establishment and measurement procedures and first results of a large long term cooperative study comparing a number of widely different silvicultural regimes applied to young growth douglas fir pseudotsuga menziesii stands managed for multiple objectives regimes consist of 1 conventional clearcutting followed by intermediate thinning 2 retention of reserve trees to create a two aged stand 3 small patch cuts dispersed within a thinned matrix repeated at approximately 15 year intervals to create a mosaic of age classes 4 group selection within a thinned matrix on an approximate 15 year cycle 5 continued thinning on an extended rotation and 6 an untreated control each of these regimes is on operationsize units about 30 to 70 acres each output variables to be evaluated include conventional timber growth and yield statistics harvest costs sale layout and administration costs aesthetic effects and public acceptance soil disturbance bird populations and economic aspects descriptive statistics and some initial results are presented for the first replicate established in 1997 98 biog johannsen s 1983 biography won the francis parkman prize of the society of american historians though most know douglas for his famous debates with abraham lincoln johannsen reveals him to be one of the most powerful and formidable politicians of his time this edition contains a new introduction previously published in hbk chicago univ of chicago press 1990 the psychology of arson is the first book in its field to focus specifically on contemporary topics relevant to practitioners and professionals working with adolescent and adult deliberate firesetters rebekah doley geoffrey dickens and theresa gannon have integrated the very latest information regarding prevalence theory research and practice in one accessible resource and provide practical advice strategies and techniques in a context of evidence based research which will be invaluable for all treatment providers who work in the field of deliberate fire setting unique features of this book include chapters considering community awareness strategies survivors of arson filicide and suicide by fire as well as a new treatment model developed on the basis of the latest research in the field it is divided into four parts theories and typologies of firesetting legal investigative and preventative issues assessment and risk assessment of deliberate firesetters treatment needs and management of deliberate firesetters the psychology of arson provides the first scientist practitioner model for the treatment of arson offenders it will be an essential resource for forensic psychiatrists clinical psychologists and other professionals working with this client group now in its fifth edition crofton and douglas s respiratory diseases has firmly established itself as the leading

clinical textbook on diseases of the chest presented for the first time as a two volume set this classic text has been completely rewritten and greatly expanded extensive revisions ensure that these volumes present an up to date review of all aspects of lung disease the contributions of some 18 leading authorities ensure that each area is comprehensively covered and new to this edition are chapters on the genetics of lung disease smoking air pollution sleep apnoea diving lung transplantation and medico legal aspects the changes in content reflect the pace of change in the areas concerned not only in terms of understanding of the disease processes but also their treatment the single chapter on asthma that appeared in previous editions has now been expanded into three chapters covering epidemiology mechanisms and management reflecting the enormous research effort currently underway following a marked increase in the incidence of this disease in recent years this new edition continues to provide an excellent reference both for the trainee and specialist in respiratory medicine as well as the general physician it will be extremely useful on the ward and in the office where clinical problems arise and questions are asked which need clear answers
