scientific philosophers examine the nature and significance
of levels of organization a core structural principle in the
biological sciences this volume examines the idea of levels
of organization as a distinct object of investigation
considering its merits as a core organizational principle for
the scientific image of the natural world it approaches
levels of organization roughly the idea that the natural
world is segregated into part whole relationships of
increasing spatiotemporal scale and complexity in terms of
its roles in scientific reasoning as a dynamic open ended
idea capable of performing multiple overlapping functions in
distinct empirical settings the contributors scientific
philosophers with longstanding ties to the biological
sciences discuss topics including the philosophical and
scientific contexts for an inquiry into levels whether the
concept can actually deliver on its organizational promises
the role of levels in the development and evolution of
complex systems conditional independence and downward
causation and the extension of the concept into the
sociocultural realm taken together the contributions embrace
the diverse usages of the term as aspects of the big picture
of levels of organization contributors jan baedke robert w

there seems to be no end to the flood of conferences
workshops panel discussions reports and research studies
calling for change in the introductory science courses in our

colleges and universities but there comes a time to move from criticism to action in 1993 the division of undergraduate education of the national science foundation called for proposals for systemic initiatives to change the way introductory chemistry is taught one of the five awards was to design develop and implement the peer led workshop a new structure to help students learn science this book is a study of 15 years of work by the peer led team learning pltl project a national consortium of faculty learning specialists and students the authors have been in the thick of the action as project evaluator gafney and co principle investigator varma nelson readers of this book will find a story of successful change in educational practice a story that continues today as new institutions faculty and disciplines adopt the pltl model they will learn the model in theory and in practice and the supporting data that encourage others to adopt and adapt pltl to new situations although the project has long since lost count of the number of implementations of the model conservative estimates are that more than 100 community and four year colleges and a range of universities have adopted the pltl model to advance student learning for more than 20 000 students in a variety of stem disciplines

in recent years problems such as environmental and economic crises and pandemics caused by new viruses have been occurring on a global scale globalization brings about benefits but it can increase the potential risks of systemic problems leading to system wide disruptions the coronavirus pandemic declared on march 11 2020 by the world health organization has revealed social disparities in the form of a higher risk of death for people of low socioeconomic status and has caused massive destruction of the economy and of globalization itself extensive efforts to cope with these challenges have often led to the emergence of additional

problems due to the chain of hidden causation what can be done to protect against such emerging challenges despite the resulting complexity once these individual problems are considered as different aspects of a single whole seemingly contradictory issues can become totally understandable as they can be integrated into a single coherent framework this is the integrationist approach in contrast to the reductionist approach situations of this kind are truly relevant to understanding the question what are creative complex systems this book features contributions by members and colleagues of the kyoto university international research unit of integrated complex system science it broadens our outlook from the traditional view of stability in which global situations are eventually stabilized after the impact of destruction to creative complex systems
