Sociology: A Down to Earth Approach 2015-05-20

James Henslin has always been able to share the excitement of sociology with his acclaimed down to earth approach and personal writing style that highlight the sociology of everyday life and its relevance to students' lives. Adapted for students studying within Australia, this text, now in a second edition, has been made even more relevant and engaging to students with wit, personal reflection, and illuminating examples. The local author team shares their passion for sociology, promotes sociology to students, and entices them to delve deeper into this exciting science. Six central themes run throughout this text: down to earth sociology, globalisation, cultural diversity, critical thinking, the new technology, and the growing influence of the mass media on our lives. These themes are especially useful for introducing the controversial topics that make studying sociology such a lively, exciting activity.

Trance and Treatment 2008-05-20

What is hypnosis? Despite widespread misconceptions, hypnosis is not a treatment in itself; instead, it is a facilitator, a useful diagnostic tool that can help the practitioner choose an appropriate treatment modality and accelerate various primary treatment strategies. The second edition of this remarkable work, first published 25 years ago, is written to provide both beginning and seasoned practitioners with a brief, disciplined technique for mobilizing and learning from an individual's capacity to concentrate, putting to rest both exaggerated fears about hypnosis and overblown statements of its efficacy. This compelling volume brings scientific discipline to a systematic exploration of the clinical uses and limitations of hypnosis. The challenge was to develop a clinical measurement that could transform a fascinating amalgam of anecdotes, speculations, clinical intuitions, and observations, and laboratory advances into a more fruitful and systematic body of information. Thus was born the authors' hypnotic induction profile (HIP), a crucial 10-minute clinical assessment procedure that relates the spectrum of hypnotizability to personality style, psychopathology, and treatment outcome. Structured to reflect the flow of a typical evaluation and treatment session, and highlighted by case examples throughout, this remarkable synthesis describes how to use the HIP, reviews relevant literature, and details principles and short and long-term treatment strategies for smoking control, eating disorders, anxiety, concentration, and insomnia, phobias, pain control, psychosomatic disorders, and conversion.
