Shaping Femininity 2021-10-07 fashion designers are presented with a range of methods and concepts for pattern cutting are presented the main body of these methods both traditional and contemporary is predominately based on a theoretical approximation of the body that is derived from horizontal and vertical measurements of the body in an upright position the tailoring matrix as a consequence there is a lack of interactive and dynamic qualities in methods connected to this paradigm of garment construction from both expressional and functional perspectives this work proposes and explores an alternative paradigm for pattern cutting that includes a new theoretical approximation of the body as well as a more kinetic method for garment construction that unlike the prevalent theory and its related methods takes as its point of origin the interaction between the anisotropic fabric and the biomechanical structure of the body as such the research conducted here is basic research aiming to identify fundamental principles for garment construction based on some key principles found in the works of geneviève sevin doering and in pre

tailoring methods for constructing garments the proposed theory for and method of garment construction was developed through concrete experiments by cutting and draping fabrics on live models instead of a static matrix of a non moving body the result is a kinetic construction theory of the body that is comprised of balance directions and key biomechanical points along with an alternative draping method for dressmaking this methodology challenges the fundamental relationship between dress garment construction and the body working from the body outward as opposed to the methods that are based on the prevalent paradigm of the tailoring matrix which work from the outside toward the body this alternative theory for understanding the body and the proposed method of working allows for diverse expressions and enhanced functional possibilities in dress

Practical Analysis and Reconstruction of Shooting Incidents 2015-11-17 architecture is making its presence felt in cutting edge fashion the pliable metals membrane structures lightweight glasses and plastics used in building construction are creeping onto the catwalk as they do so their impact on recent textile developments has produced fabrics that enable clothing to act as individual climate controlled environments that can exchange information with embedded sensors resulting in wearable dwellings that act as both shelter and clothing at the same time architects are borrowing the techniques of pleating stapling cutting and draping from traditional tailoring to design buildings that are flexible interactive inflatable and even portable although the relationship between architecture and fashion was recognized more than a century ago the connection between them has rarely been explored by historians designers or practicing architects the fashion of architecture is the first attempt to investigate the contemporary relationship between architecture and fashion in considerable depth by examining the ideas imagery techniques and materials used by visionaries such as martin margiela issey miyake alexander mcqueen tadao ando and daniel libeskind as mavericks ranging from hussein chalayan and rei kawakubo to rem koolhaas and zaha hadid describe architecture's role in the formation of fashion identities new readings of both areas emerge probing and far reaching in its content the fashion of architecture is the most comprehensive study of this exciting area to date

Computer Vision – ECCV 2022 2022-11-10 philologists aiming to reconstruct the grammar of ancient languages face the problem that the available data always underdetermine grammar and in the case of gaps possible mistakes and idiosyncracies there are no native speakers to consult the authors of this volume overcome this difficulty by adopting the methodology that a child uses in the course of language acquisition they interpret the data they have access to in terms of universal grammar more precisely in terms of a hypothetical model of ug their studies discussing syntactic and morphosyntactic questions of older egyptian coptic sumerian akkadian biblical hebrew classical greek latin and classical sanskrit demonstrate that descriptive problems which have proved unsolvable for the traditional inductive approach can be reduced to the interaction of regular operations and constraints of ug the proposed analyses also bear on linguistic theory they provide crucial new data and new generalizations concerning such basic questions of generative syntax as discourse motivated movement operations the correlation of movement and agreement a shift from lexical case marking to structural case marking the licensing of structural case in infinitival constructions the structure of coordinate phrases possessive constructions with an external possessor and the role of event structure in syntax in addition to confirming or refuting certain specific hypotheses they also provide empirical evidence of the perhaps most basic tenet of generative theory according to which ug is part of the genetic endowment of the human species i e human languages do not develop parallel with the development of human civilization some of the languages examined in this volume were spoken as much as 5000 years old still their grammars do not differ in any relevant respect from the grammars of languages spoken today

Universal Grammar in the Reconstruction of Ancient Languages 2011-12-22 what kind of allusion is possible in a poetry derived from a centuries long oral tradition and what kind of oral derived poetry are the homeric epics comparison of homeric epic with south slavic heroic song has suggested certain types of answers to these questions yet the south slavic paradigm is neither straightforward in itself nor necessarily the only pertinent paradigm augustan latin poetry uses many sophisticated and highly self conscious techniques of allusion which can this book contends be suggestively paralleled in homeric epic and some of the same techniques

of allusion can be found in near eastern poetry of the third and second millennia bc by attending to these various paradigms this challenging study argues for a new understanding of homeric allusion and its place in literary history broaching the question of whether there can have been historical continuity in a poetics of allusion stretching from the mesopotamian epic of gilgamesh via the iliad and odyssey to the aeneid and metamorphoses despite the enormous disparities of time and place and of language and culture including those represented by the cuneiform tablet the papyrus roll and by an oral performance culture the fundamental methodological problems are explored through a series of interlocking case studies treating of how the odyssey conceivably alludes to the iliad and also to earlier poetry on odysseus homecoming the iliad to earlier poetry on the ethiopian hero memnon the homeric hymn to demeter to earlier poetry on hades abduction of persephone and early greek epic to mesopotamian mythological poetry pre eminently the babylonian epic of gilgamesh
