

# Epub free E waste recycling

## technologies wipo Copy

patent landscape report on e waste recycling technologies

the report covers in detail patent applications and granted

patents within the space of e waste processing and the

recycling and recovery of materials from consumer products

at the end of their useful life the wipo green database of

technologies and needs which contains nearly 130 000 green

technologies has more than 80 technologies related to

plastics recycling 36 technologies for separating plastics and

26 technologies in the recently curated green plastics

collection while several innovative recycling technologies are

emerging numerous studies have shown that recycling can

never respond to the growing production of materials fast

enough to make a meaningful contribution to climate

mitigation activity related to specific technologies in various

domains such as health food and agriculture climate change

industrial organization contemporary theory and empirical applications 4th  
related technologies and others wipo attempts to collaborate

---

for each report with institutional partners igos ngos public  
institutions of member states working in the respective field  
we have developed a new recycling technology this  
technology achieves high value added recycling of waste  
plastics through multiple processes it can convert waste  
plastics that are originally low value high pollution low  
recovery rate and usually incinerated and landfilled into high  
quality high value recycled plastic particles with low smart  
technologies and return schemes enhance recycling material  
efficiency has a massive impact on ghg reduction by reducing  
energy consumption from production an important aspect is  
how discarded products are handled and reintroduced into  
production and use cycles the wipo green database is a free  
solutions oriented global innovation catalogue that connects  
needs for solving environmental or climate change problems  
with tangible solutions the report aims at providing patent  
based evidence on the available technologies and the  
patenting trends in the area of electronic waste e waste

background and supporting information to the partnership for  
action on computing equipment under the basel convention  
and complement the e waste recycling technologies patent  
landscape report was prepared in the context of collaboration  
of wipo with the secretariat of a the basel convention the  
report aims at providing patent based evidence on the  
available technologies and the patenting trends in the area of  
electronic waste e waste recycling and material recovery 1 e  
waste recycling technologies publication year 2013 this report  
covers in detail patent applications and granted patents within  
the space of e waste processing and the recycling and  
recovery of materials from consumer products at the end of  
their useful life wipo green is an online platform for  
technology exchange it supports global efforts to address  
climate change by connecting providers and seekers of  
environmentally friendly technologies through its database  
network and acceleration projects it brings together key
