a unique and ground breaking book from two leading specialists on adhesion and adhesives for wood and lignocellulosic materials the book is a comprehensive treatment covering a wide range of subjects uniquely available in a single source for the first time a material science approach has been adopted in dealing with wood adhesion and adhesives the approach of the authors is to bring out hierarchical cellular and porous characteristics of wood with polymeric cell wall structure along with the associated non cell wall extractives which greatly influence the interaction of wood substrate with polymeric adhesives in a very unique manner not existent in the case of other adherends environmental aspects in particular formaldehyde emission from adhesive bonded wood products has been included a significant feature of the book is the inclusion of polymeric matrix materials for wood polymer composites

this book provides essential insights into a range of newly developed numerical optimization techniques with a view to solving real world problems many of these problems can be modeled as nonlinear optimization problems but due to their complex nature it is not always possible to solve them using conventional optimization theory accordingly the book discusses the design and applications of non conventional numerical optimization techniques including the design of benchmark functions and the implementation of these techniques to solve real world optimization problems the book s twenty chapters examine various interesting research topics in this area including pi fraction based optimization of the pantoja bretones martin pbm antenna benchmarks benchmark function generators for single objective robust optimization algorithms convergence of gravitational search algorithms on linear and quadratic functions and an algorithm for the multi variant evolutionary synthesis of nonlinear models with real valued chromosomes delivering on its promise to explore real world scenarios the book also addresses the seismic analysis of a multi story building with optimized damper properties the application of constrained spider monkey optimization to solve portfolio optimization problems the effect of upper body motion on a bipedal robot s stability an ant colony algorithm for routing alternate fuel vehicles in multi depot vehicle routing problems enhanced fractal dimension based feature extraction for thermal face recognition and an artificial bee colony based hyper heuristic for the single machine order acceptance and scheduling problem the book will benefit not only researchers but also organizations active in such varied fields as aerospace automotive biotechnology consumer packaged goods electronics finance business banking oil gas geosciences and pharma to name a few

about the book india has a rich grammatical tradition still extant in the form of p  ini s grammar as well as the theories of verbal cognition these two together provide a formal theory of language communication the formal nature of the theory makes it directly relevant to the new technology called natural language processing this book first presents the key concepts from the indian grammatical tradition igt that are necessary for understanding the information flow in a language string and its dynamics a fresh look at these concepts from the perspective of natural language processing is provided this is then followed by a concrete application of building a parser for sanskrit using the framework of indian grammatical tradition this book not only documents the salient pieces of work carried out over the last quarter century under computational paninian grammar but provides the first comprehensive exposition of the ideas involved it fills a gap for students of computational linguistics natural language processing who are working on indian languages using p  inian grammatical framework for developing their computational models and do not have direct access to the texts in sanskrit similarly for the sanskrit scholars and the students it provides an example of concrete application of the indian theories to solve a contemporary problem about the author amba kulkarni is a computational linguist since 1991 she has been engaged in showing the relevance of indian grammatical tradition to the field of computational linguistics she has contributed towards the building of anusaarakas language accessors among english and indian languages she is the founder head of the department of sanskrit studies university of hyderabad established in 2006 since then her focus of research is on use of indian grammatical theories for computational processing of sanskrit texts under her leadership a consortium of institutes developed several computational tools for sanskrit and also a prototype of sanskrit hindi machine translation system in 2015 she was awarded a vishishta sanskrit sevavрати sammana by the rashtriya sanskrit sansthan new delhi for her contribution to the studies and research on sanskrit based knowledge system she was a fellow at the indian institute of advanced study shimla during 2015 17

the distinct personal laws that govern the major religious groups are a major aspect of indian multiculturalism and secularism and support specific gendered rights in family life nation and family is the most comprehensive study to date of the public discourses processes of social mobilization legislation and case law that formed india s three major personal law systems which govern hindus muslims and christians it for the first time systematically compares indian experiences to those in a wide range of other countries that inherited personal laws specific to religious group sect or ethnic group the book shows why india s postcolonial policy makers changed the personal laws they inherited less than the rulers of turkey and tunisia but far more than those of algeria syria and lebanon and increased women s rights for the most part contrary to the trend in pakistan iran sudan and nigeria since the 1970s subramanian demonstrates that discourses of community and features of state society relations shape the course of personal law ruling elites discourses about the nation its cultural groups and its traditions interact with the state society relations that regimes inherit and the projects of regimes to change their relations with society these interactions influence the pattern of multiculturalism the place of religion in public policy and public life and the forms of regulation of family life the book shows how the greater engagement of political elites with initiatives among the

hindu majority and the predominant place they gave hindu motifs in discourses about the nation shaped indian multiculturalism and secularism contrary to current understandings in exploring the significant role of communitarian discourses in shaping state society relations and public policy it takes state in society approaches to comparative politics political sociology and legal studies in new directions
