2004

intended for beginners in ergodic theory this introductory textbook addresses

2023-09-20

11/21

essentials of life span
development

students as well as researchers in mathematical physics the main novelty is the systematic treatment of characteristic problems in ergodic theory by a unified method in terms of convergent power series and renormalization group methods in particular basic concepts of ergodicity like gibbs states are developed and applied to e g asonov systems or kam theory many examples illustrate the ideas and in addition a substantial number of interesting topics are treated in the form of guided problems

1-2-3 Tarot

1983

this book presents a systematic and unified approach for modern nonparametric treatment of missing and modified data via examples of density and hazard rate estimation nonparametric regression filtering signals and time series analysis all basic types of missing at random and not at random biasing truncation censoring and measurement errors are discussed and their treatment is explained ten chapters of the book cover basic cases of direct data biased data nondestructive and destructive missing survival data modified by truncation and censoring missing survival data stationary and nonstationary time series and processes and ill posed modifications the coverage is suitable for self study or a one semester course for graduate students with a prerequisite of a standard course in introductory probability exercises of various levels of difficulty will be helpful for the instructor and self study the book is primarily about practically important small samples it explains when consistent estimation is possible and why in some cases missing data should be ignored and why others must be considered if missing or data modification makes consistent estimation impossible then the author explains what type of action is needed to restore the lost information the book contains more than a hundred figures with simulated data that explain virtually every setting claim and development the
