twenty million unsafe abortions are performed each year 90 of which occur in the developing world in many countries abortion is still illegal in others a variety of cultural barriers force women to seek out underground abortions even in countries such as china where abortion is fully accessible in practice as well as in theory our understanding of the phenomenon is very partial in discussing issues that are of the utmost important for understanding abortion this book furthers our knowledge of this one of the most important elements of reproductive health the result of a global research project commissioned by the world health organization the book provides new information on abortion vital for both policy debate and strategies for intervention the contributors explain the extent of abortion why it happens and what happens when it does a section on women s perspectives explains how women across the world feel when they find they must abort the processes by which they go about it how the underground networks operate and the obstacles these women must face the book addresses providers views on abortion highlighting how their personal values and opinions influence the total experience that women undergo several contributions discuss the relationship between contraception and abortion while a section on adolescents addresses a newly emerging concern for programme managers around the world with more information that has ever been previously available this book is the most comprehensive and up to date picture of abortion globally it also demonstrates that true reproductive freedom comes only with women s empowerment and with an acceptable quality of health care it will be necessary reading for students and academics of women s studies and population studies as well as for practitioners in the health sector

whatever reproductive choices women make whether they opt to end a pregnancy through abortion or continue to term and give birth they are considered to be at risk of suffering serious mental health problems according to opponents of abortion in the united states potential injury to women is a major reason why people should consider abortion a problem on the other hand becoming a mother can also be considered a big risk this fine well balanced book is about how people represent the results of reproductive choices it examines how and why pregnancy and its various outcomes have come to be discussed this way the author s interest in the medicalization of reproduction its representation as a mental health problem first arose in relation to abortion there is a very clear contrast between the construction of women who have abortions implied by moralized argument against abortion and the construction that results when the case against abortion focuses on its effects on women s mental health lee argues that claims that connect abortion with mental illness have been limited in their influence but this is not to suggest that they have not become a focus for discussion and have had no impact the limits to such claims about abortion do not by any means suggest limits to the process of the medicalization of pregnancy more broadly that is a process of demedicalization the final theme of ellie lee s book is the selective medicalization of reproduction centering on the claim that abortion can create a post abortion syndrome the author examines the medicalization of the abortion problem on both sides of the atlantic lee points to contrasts in legal and medical dimensions of the abortion issue that make for some important differences but argues that in both the united states and great britain the post abortion syndrome claim constitutes an example of the limits to medicalization and the return to the theme of motherhood as a psychological ordeal lee makes the case for looking to the social dimensions of mental health problems to account for and understand debates about what makes women ill ellie lee is research fellow in the department of sociology and social policy university of southampton highfield united kingdom

fifteen years ago new jersey became the first of over twenty states to introduce the family cap a welfare reform policy that reduces or eliminates cash benefits for unmarried women on public assistance who become pregnant the caps have lowered extra marital birth rates as intended but as michael j camasso shows convincingly in this provocative book they did so in a manner that few of the policys architects are willing to acknowledge publicly namely by increasing the abortion rate disproportionately among black and hispanic women in family caps abortion and women of color camasso who headed up the evaluation of the nations first cap presents the caps history from inception through implementation to his investigation and the dramatic attempts to squelch his unpleasant findings the book is filled with devastatingly clear cut evidence and hard nosed data analyses yet camasso also pays close attention to the reactions his findings provoked in policymakers both conservative and liberal who were unprepared for the effects of their crude social engineering and did not want their success scrutinized too closely camasso argues that absent any successful rehabilitation or marriage strategies abortion provides a viable third way for policymakers to help black and hispanic women accumulate the social and human capital they need to escape welfare while simultaneously appealing to liberals passion for reproductive freedom and the neoconservatives sense of social pragmatism camasso s conclusions will please no one along the political spectrum making it all the more essential for them to be studied widely a classic example of what can happen to research and the researcher when research findings become misaligned with political goals and strategies family caps abortion and women of color is sure to foment a contentious but vital discussion among all who read it

focuses on the challenges faced in accessing and providing abortion services in rural areas even under progressive abortion legislation accessing abortion services in rural areas under conditions of liberal abortion legislation is neither straightforward nor simple as the south african example shows the liberalization of abortion legislation was the first step in granting pregnant persons access to abortion care despite this and some progress in implementation many challenges persist resulting in a lack of services especially in areas where distances and transport costs are a factor drawing on the findings of a study conducted in three rural districts of the eastern cape the authors highlight the complexities involved in understanding problematic or unwanted pregnancies and abortion services within these communities the reported barriers to and facilitators of access to abortion services among rural populations and

preferences for types of abortion services a key finding is the conundrum of costs versus confidentiality lack of confidentiality involves additional costs to access services outside the area high costs mean that confidentiality may have to be foregone which leads to stigma the authors place the findings within a reparative reproductive justice framework and present a comprehensive set of recommendations abortion services and reproductive justice in rural south africa is an insightful and informative resource the first of its kind for scholars in health and sociology reproductive health policy makers national planners health facility managers and providers and activists
