**The Automobile Handbook** 1916 taiwan customs export import regulations incentives and procedures handbook strategic practical information and regulations

**Lithuania Investment and Business Guide Volume 1 Strategic and Practical Information** 2015-09-11 excerpt from armature winding and motor repair practical information and data covering winding and reconnecting procedure for direct and alternating current machines compiled for electrical men responsible for the operation and repair of motors and generators in industrial plants and for repairmen in this book no attempt has been made to discuss the subject of armature winding from theoretical or design standpoints on the contrary it is a compilation of practical methods that are used by repairmen and armature winders

in selecting the material a special effort has been made to include as far as possible details of those methods which have been found by actual experience to represent best practice in a repair shop of average size in this work the writer has drawn from his own experience in repair work from the experiences of repairmen and armature winders in large and small repair shops and manufacturing plants which have been visited from descriptions of practical methods and the procedure followed in the solution of special problems as presented by practical men in technical journals the title of repairman as used throughout this book is one that a good engineer can bear with pride when he measures up to all its qualifications such an engineer is one who in the majority of cases not only knows what to do in the case of an electrical trouble but just how to proceed to do that particular thing and who seldom guesses without a good percentage of the probabilities of being right in his favor the main difference between the designer and the repairman is that the former must know what to do while the latter must know how to do it a capable repairman combines both qualifications through years of experience when called upon to locate troubles in motors and generators electricians and repairmen whose experience in this kind of work has been limited often find themselves wondering just what to do first it is from just this viewpoint that the information on winding procedure and the hunting and correcting of troubles has been presented that is instead of discussing the fundamentals involved in any method of working out a repair problem the actual problem or job as the case may be is discussed from the how to do it standpoint about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
