the economy of machinery and manufactures a three volume book on as the name suggests the manufacture of goods the machines that manufacture those goods and of course the organization of those who operate the machines themselves it was an early influential work of operational research and is today best remembered at best as a seminal work on the organization of factories and production the one in which the famous babbage principle was first set forth or at worst as a curio of the industrial revolution author charles babbage is perhaps better known for his creation of the analytical engine his association with ada lovelace and his modern title as the father of the computer but he was also an astute economist theorist and in his the economy of machinery and manufactures he convincingly displays his acumen for economics and the organization of industrial production

nominated for the royal historical society whitfield book prize 2013 nominated for the nymas arthur goodzeit book award 2013 nominated for the sahr templer medal 2013 this book provides the first comprehensive study of the british army s horse services between 1875 1925 including the use of horses in the 1899 1902 anglo boer and the 1914 18 wars there is a particular focus on the military procurement of horses in relation to the domestic horse breeding industry foreign supply in times of war the debate about mechanization versus the horse and an integrated military transport system during the 1899 1902 war the recently created army veterinary and remount departments and horse registration scheme were severely tested and found wanting following the appalling suffering and loss of horses during this war the period 1902 to 1914 was critical for the development of the horse services the crucial elements in effectively horsing the army were recognized supply care and organization the army

depended on the creation of a rapid and effective horse mobilization scheme and the ability to sustain expansion in the field the civilian horse market was central to the supply of military horses in peace and war and by obtaining reliable information on the number and type of horses available to them the army could guarantee a regular supply there was also a need to learn lessons from the 1899 1902 war for the planning and expansion of auxiliary services for example blacksmiths saddlers remount depots and veterinary hospitals on the outbreak of war in 1914 the army had an organized reserve and mobilization scheme a completely integrated transport system using horses mechanized vehicles and rail networks as the war progressed there were serious questions about the continuing supply of horses from both home and world markets shortages of transport for moving them from the country of purchase and the growing submarine menace developments by 1919 in mechanical vehicles were acknowledged by many as signaling the end of the military reliance upon the horse even though it remained the main source of motive power and cavalry the main arm of exploitation many lessons from the 1899 1902 war had been learnt shown in the improved performance of the horse services during 1914 18 the health of animals was maintained at a higher standard than in any former war and remounts were supplied to all theaters of war and to armies of allied nations at the end of hostilities nearly eight million animals had to be quickly disposed of as humanely as possible to bring the army back to its peacetime requirements
