would better state institutions increase tax collection or would higher tax collection help improve state institutions in the absence of conclusive guidance from theory this paper searches for an empirical answer to this question using a panel dataset covering 110 non resource rich countries from 1996 to 2017 employing a panel vector error correction model the paper finds that tax capacity and state institutions cause and reinforce each other for a wide range of country groups the bi directional causality results suggest that

developing tax capacity and building state institutions need to go hand in hand for best results particularly in developing countries based on the impulse response analyses the paper also finds that the causal effects in advanced economies are generally low in both directions while in developing countries both tax capacity and institutions shocks have larger positive impacts on institutions and tax capacity respectively
