Bridging Worlds 2010

molecular physics and hypersonic flows bridges the gap between the fluid dynamics and molecular physics communities

emphasizing the role played by elementary processes in hypersonic flows in particular the work is primarily dedicated to filling the gap between microscopic and macroscopic treatments of the source terms to be inserted in the fluid dynamics codes the first part of the book describes the molecular dynamics of elementary processes both in the gas phase and in the interaction with surfaces by using quantum mechanical and phenomenological approaches a second group of contributions describes thermodynamics and transport properties of air components with special attention to the transport of internal energy a series of papers is devoted to the experimental and theoretical study of the flow of partially ionized gases subsequent contributions treat modern computational techniques for 3 d hypersonic flow non equilibrium vibrational kinetics are then described together with the coupling of vibration dissociation processes as they affect hypersonic flows special emphasis is given to the interfacing of non equilibrium models with computational fluid dynamics methods finally the last part of the book deals with the application of direct monte carlo methods in describing rarefied flows

Abstract Bulletin of the Institute of Paper Chemistry 1982-06

dictionary of chemistry and chemical technology presents approximately 12 000 terminologies wherein these terms and their corresponding equivalents have been checked in literature in each of the six languages including english spanish german french polish and russian each separately numbered english term in this book refers to a distinct concept as determined from the existing literature of the subject the entries in this book are arranged in alphabetical order of the english terms and are numbered consecutively this book provides as well an index of english synonyms for chemical compounds to which the reader should refer in case a wanted term cannot be found in the main text this book is a valuable resource for chemists readers of foreign literature seeking the exact corresponding equivalent of a scientific expression will also find this book extremely useful
