this book gives the reader an appropriate background for diagnosing and treating patients with vestibular disorders most causes of vertigo can be effectively treated and there have been major advancements in both vertigo diagnosis and treatment in recent years unfortunately for many practitioners modern training in the management of vertigo was not included as part of their residency the major barrier to effective treatment in most patients seems to be lack of awareness of the correct diagnoses and treatment options on the part of providers this book directly addresses that knowledge

gap the text is divided into 16 chapters the initial chapters are an overview of normal vestibular anatomy function and testing the next section of the book builds on these chapters to discuss the treatment of specific disorders like ménière s disease vestibular neuritis benign paroxysmal positional vertigo and third mobile window conditions the connection between vestibular disorders and psychiatric conditions such as anxiety and depression is discussed recent advancements in the treatment of vestibular disorders are covered with chapters on vestibular physical therapy and vestibular implantation the book closes with a discussion of aging and the vestibular system disorders of the vestibular system is an excellent guide to this rapidly evolving field and will be of great use to physicians in otolaryngology neurology and general practice who are likely to encounter patients with dizziness and vertigo

the sixteenth annual symposium of the society for the study of inborn errors of metabolism was held in bristol from 12th to 14th july 1978 about 25 invited speakers and 150 participants came from many parts of europe and north america to consider the topic inherited disorders of carbohydrate metabolism although some aspects of these disorders have formed part of the programme of previous symposia organized by the society this was the first attempt to discuss them in a systematic manner the subject carbohydrate disorders embraces both familiar and well documented conditions and some lesser known aspects of genetic disease in all of these there remains much to be learnt about clinical and laboratory diagnosis treatment biochemical screening and pathogenesis thus one aim of the society to combine clinical and scientific interest can rarely have been better achieved in a single symposium since the programme included diseases from six different areas of carbohydrate metabolism and contained so many distinguished speakers it is impossible to highlight the more important aspects of this symposium within a short space each section made a notable contribution to knowledge and when

time was available lively discussions ensued which have been recorded in the book however we wish to mention our two special lectures because they recognise people to whom the society owes a great deal the milner lecture has been given for the past 6 years as a tribute to mr j
