Utilization of high-resolution satellite images to improve statistics for the sweetpotato cultivated area of Kumi district, Uganda 2017-02-16 in many classification problems relevant features are unknown a priori therefore many candidate features are introduced to represent the phenomenon unfortunately it is often true that most of these are either partially or completely redundant to the target thus when the size of the dataset is large an important primary step in the classification task is to remove the unwanted features in this framework this study proposes a new subset selection algorithm called jss e jackknifed stepwise selection with exhaustive search in order to improve the stepwise selection procedure the procedure is applied in a supervised classification approach for the differential diagnosis of raynaud s phenomenon on the basis of functional infrared ir imaging data the results discussed for a dataset collected at itab laboratory in chieti allow to refine the experimental protocol in a completely new non invasive way

Investigations at Catie on the Potential of High- Resolution Radar Images for Monitoring of Agriculture in Central America 2012-12-06 high resolution electron microscopy hrem has become a most powerful method for investigating the internal structure of materials on an atomic scale of around 0.1 nm the authors clearly explain both the theory and practice of hrem for materials science in addition to a fundamental formulation of the imaging process of hrem there is detailed explanation of image simulation indispensable for interpretation of high resolution images essential information on appropriate imaging conditions for observing lattice images and structure images is presented and methods for extracting structural information from these observations are clearly shown including examples in advanced materials dislocations interfaces and surfaces are dealt with and materials such as composite ceramics high tc superconductors and quasicrystals are also considered included are sections on the latest instruments and techniques such as the imaging plate and quantitative hrem

Supervised Classification of Thermal High-Resolution Infrared Images: A case study for the diagnosis of Raynaud's Phenomenon 2019-11-06 recently growing interest in the use of remote sensing imagery has appeared to provide synoptic maps of water quality parameters in coastal

and inner water ecosystems monitoring of complex land ecosystems for biodiversity conservation precision agriculture for the management of soils crops and pests urban planning disaster monitoring etc however for these maps to achieve their full potential it is important to engage in periodic monitoring and analysis of multi temporal changes in this context very high resolution vhr satellite based optical infrared and radar imaging instruments provide reliable information to implement spatially based conservation actions moreover they enable observations of parameters of our environment at greater broader spatial and finer temporal scales than those allowed through field observation alone in this sense recent very high resolution satellite technologies and image processing algorithms present the opportunity to develop quantitative techniques that have the potential to improve upon traditional techniques in terms of cost mapping fidelity and objectivity typical applications include multi temporal classification recognition and tracking of specific patterns multisensor data fusion analysis of land marine ecosystem processes and environment monitoring etc this book aims to collect new developments methodologies and applications of very high resolution satellite data for remote sensing the works selected provide to the research community the most recent advances on all aspects of vhr satellite remote sensing

High Resolution Imaging in Microscopy and Ophthalmology 2012-12-06 the decision of springer verlag to publish this book in english came as a pleasant surprise the fact is that i started writing the first version of the book back in 1978 i wished to attract attention to potentialities inherent in selected area electron diffraction saed which for various reasons were not being put to use by that time i had at my disposal certain structural data on natural and synthetic minerals obtained using saed and high resolution electron microscopy hrem and this stimulated my writing this book there were several aspects concerning these data that i

wished to emphasize first it was mostly new and understudied minerals that possess the peculiar structural features studied by saed and hrem this could interest mineralogists crystallo chemists and crystallographers second the results obtained indi cated that under certain conditions saed could be an effective and sometimes the only possible method for structure analysis of minerals this inference was of primary importance since fine dispersion and poor crystallinity of numerous natural and synthe tic minerals makes their structure study by conventional diffrac tion methods hardly possible third it was demonstrated that in many cases x ray powder diffraction analysis of dispersed miner als ought to be combined with saed and local energy dispersion analysis this was important since researchers in structural min eralogy quite often ignored and still ignore even the simplest in formation which is readily available from geometrical analysis of saed patterns obtained from microcrystals

High Resolution Astrophotography 2014-03-01 with the proliferation of multiple monitor systems we should not be stuck with multiple copies of the same image on all of those monitors follow this illustrated step by step guide and you will not have to tolerate that visual nuisance we will go through all steps required to use a single wallpaper across all of the screens that may be attached to your desktop or laptop computer system a two monitor setup seems to be somewhat of a standard configuration for work and gaming systems you may have three four or even eight monitors and you can use a single wallpaper across all of them

Electron Diffraction and High-Resolution Electron Microscopy of Mineral Structures 2022-11-29 this proceedings has four thematic parts advanced aerospace manufacturing technology near space system and application technology accurate perception technology of the earth and collaborative fusion application technology the chreocs china high resolution earth observation conference focus on the popular topics including military civilian integration the one belt and one road project the transformation of scientific research achievements and it also discusses the new ideas new technologies new methods and new developments the chreocs have effectively promoted high level institutional mechanisms technological innovation and industrial upgrading in the high resolution earth observation area and arouse the influence of

the national sponsored major project all papers in this proceeding are from the 8th chreoc and most authors are the researchers and experts participating the state major project cheos the papers are the extraction of research results and reflect the technique level and research direction of the field high resolution earth observation all articles have gone through the scientific and strict reviews for several rounds by the experts from the related fields and therefore reflect the research level and technology innovation of the high resolution field earth observation it will be an informative and valuable reference for both academic research and engineering practice the year 2022 is the final year of high resolution special projects after more than ten years of construction the task of high resolution special projects has been basically completed the core technology has been comprehensively breakthrough and the typical achievements have been rapidly transformed providing strong support for national security national defense construction and national economic development

Control Your Windows 7 View 2002 previous edition won first prize in the gastroenterology category of the 2008 bma medical book competition high resolution endoscopy and narrowband imaging have revolutionized the field edited by a gastroenterologist with a reputation for delivering outstanding material this new edition of an award winning atlas provides you with an outstanding collection of images videos and expert diagnostic guidance to enhance your decision making to accelerate your learning dr cohen offers more than 2000 endoscopic images emphasizing conditions for which nbi is particularly useful such as finding dysplasia in barrett s mucosa and diagnosing adenomatous colon polyps and providing exceptional preparation for the future of endoscopy practice with a broad new look at normal and abnormal findings throughout the gi tract the book is divided into three main parts the basics of nbi clinical applications of nbi atlas of 1600 color images broken into sections on the pharynx and esophagus stomach small intestine and colon including correlating histopathology and multiple examples of key pathologies the accompanying website features more than 85 video clips containing over 3 hours of annotated video to give you a complete sense of how hre and nbi work and look in real time including during therapeutic procedures all of the over 1000 new

images appear in much brighter color reflecting the advance in scope technology since the first edition new chapters have been added to present the data supporting increased use of nbi in optical diagnosis and in the context of therapeutic procedures for the first time brilliant images of the bile duct and pancreas are included as the imaging revolution has expanded to reach these new locations this spectacular new imaging modality promises to enhance endoscopic decision making in real time facilitate therapeutic maneuvers make tissue sampling more precise and make resection of mucosal neoplasia more complete expertly guiding you through the latest advances this book facilitates your mastery of the field and provides an up to date reference for gastroenterologists and endoscopists to improve their practice

Reservoir Simulations 2009-11-18 changes in sea surface roughness are usually associated with

a change in the sea surface wind field this interaction has been exploited to measure sea surface wind speed by scatterometry a number of features on the sea surface associated with changes in roughness can be observed by synthetic aperture radar sar because of the change in bragg backscatter of the radar signal by damping of the resonant ocean capillary waves with various radar frequencies resolutions and modes of polarization sea surface features have been analyzed in numerous campaigns bringing various datasets together thus allowing for new insights into small scale processes at a larger areal coverage this special issue aims at investigating sea surface features detected by high spatial resolution radar systems such as sar
