high prevalence of multidrug resistant microorganisms in the etiologic structure of different infectious processes significantly decreases the effectiveness of the treatment and enhances the probability of an unfavorable outcome from the infection combinations between antibiotics and other antimicrobial agents represent one of the most promising approaches for combating multidrug resistant bacteria a high therapeutic potential exists for combinations of antibiotics and natural antimicrobial substances with complex mechanisms of action and multiple healing properties such as plant essential oils the purpose of the present chapter is to review published studies on antibiotic essential oil combinations and discuss the prospects for future studies in general many studies have shown the potential for essential oils to act synergistically with antibiotics in vitro the main proposed mechanism of this beneficial effect is through inhibition of efflux pumps by some essential oils which restores the activity of the antibiotic future efforts should be directed into further studies of antibiotic essential oil combinations against multidrug resistant bacteria with an emphasis on understanding the mechanisms of the produced effect combinations of essential oils with different types of antimicrobial agents such as bacteriophages nanoparticles and quorum sensing inhibitors require greater attention and are worthy of future investigations

this book introduces plant metabolomics an experimental approach that is important in both functional genomics and systems biology it can be argued that metabolite data is most closely linked to phenotypes and that changes in metabolite content or metabolic networks can therefore indicate gene function more directly than mrna transcript or protein based approaches additionally the identification of metabolic markers has important applications in plant breeding the book written by researchers who are active in plant metabolomics in china not only introduces the fundamental concepts and the latest methodological advances in the field of plant metabolomics but also details new studies from the respective scientific programs of the authors and thus reflects the current state of domestic plant metabolomics research professor xiaoquan qi is the principal investigator at the institute of botany cas professor xiaoya chen is a member of the chinese academy of science and also is the principal investigator at the shanghai institutes for biological sciences cas professor yulan wang is leading a team in biospectroscopy and metabolomics at the wuhan institute of physics and mathematics cas
