Principles of Financial Regulation 2016-07-21

the financial crisis of 2007 9 revealed serious failings in the regulation of financial institutions and markets and prompted a fundamental reconsideration of the design of financial regulation as the financial system has become ever more complex and interconnected the pace of evolution continues to accelerate it is now clear that regulation must focus on the financial system as a whole but this poses significant challenges for regulators principles of financial regulation describes how to address those challenges examining the subject from a holistic and multidisciplinary perspective principles of financial regulation considers the underlying policies and the objectives of regulation by drawing on economics finance and law methodologies the volume examines regulation in a purposive and dynamic way by framing the book in terms of what the financial system does rather than what financial regulation is by analysing specific regulatory measures the book provides readers to the opportunity to assess regulatory choices on specific policy issues and encourages critical reflection on the design of regulation

we analyze the evolution of crop and livestock producer prices and wages of unskilled laborers in ethiopia between january 2014 and january 2017 to evaluate the effect of el niño triggered droughts which started in 2015 that massively impacted parts of the country the analyses reveal no evidence of widespread adverse price effects of the drought in cereal and labor markets real prices of major cereals were lower in january 2017 compared to three years earlier especially for maize sorghum and wheat the crops that are the major source of calories in areas that were most hit by drought the decline in the cost of cereals in the food basket in january 2017 compared to three years earlier was estimated at 13.3 percent at the national level moreover this decline in cereal costs was highest in areas most affected by the drought possibly indicating the effect of major cereal imports and food aid directed to these areas considering crop and livestock prices jointly the analysis reveals that livestock cereal terms of trade improved this is mainly due to the fact that although livestock prices declined during this period as is usually seen in droughts this decline was less than the decline in prices of cereals in such areas the fluctuating behavior of cereal prices since january 2015 strikingly contrasts with the el niño triggered major drought during 1997-98 in ethiopia during that period cereal production declined by 25 percent compared to the year before with significant increases in the real price of cereals ranging between 15 and 45 percent in contrast in 2016 real cereal prices declined which appears consistent with the relatively larger cereal imports and lower impacts of the drought on national cereal production in 2015-16
