Diagram Groups

1997

diagram groups are groups consisting of spherical diagrams pictures over monoid presentations they can be also defined as fundamental groups of the squier complexes associated with monoid presentations the authors show that the class of diagram groups contains some well known groups such as the r thompson group f this class is closed under free products finite direct products and some other group theoretical operations the authors develop combinatorics on diagrams similar to the combinatorics on words this helps in finding some structure and algorithmic properties of diagram groups some of these properties are new even for r thompson s group f in particular the authors describe the centralizers of elements in f prove that it has solvable conjugacy problems etc

Visualising Business Transformation

2020-01-24

business transformation typically involves a wide range of visualisation techniques from the templates and diagrams used by managers to make better strategic choices to the experience maps used by designers to understand customer needs the technical models used by architects to propose possible solutions and the pictorial representations used by change managers to engage stakeholder groups in dialogue up until now these approaches have always been dealt with in isolation in the literature as well as in practice this is surprising because although they can look very different and tend to be produced by distinct groups of people they are all modelling different aspects of the same thing visualising business transformation draws them together for the first time into a coherent whole so that readers from any background can expand their repertoire and understand the context and rationale for each technique across the transformation lifecycle the book will appeal to a broad spectrum of readers involved in change whether that is by creating change models themselves strategists architects designers engineers business analysts developers illustrators graphic facilitators etc interpreting and using them sponsors

business change managers portfolio programme project managers communicators change champions etc or supporting those involved in change indirectly trainers coaches mentors higher education establishments and professional training facilities

the culture of diagram is about visual thinking exploring a terrain where words meet pictures and formulas meet figures the book foregrounds diagrams as tools for blurring those boundaries to focus on the production of knowledge as process it outlines a history of convergence among diverse streams of data in real time from eighteenth century print media and the diagrammatic procedures in the pages of diderot s encyclopedia to the paintings of jacques louis david and mathematical devices that reveal the unseen worlds of quantum physics central to the story is the process of correlation which invites observers to participate by eliciting leaps of imagination to fill gaps in data equations or sensations this book traces practices that ran against the grain of both locke s clear and distinct ideas and newton s causality practices greatly expanded by the calculus probabilities and protocols of data sampling today s digital technologies are rooted in the ability of high speed computers to correct errors when returning binary data to the human sensorium high tech diagrams echo the visual structures of the encyclopedia arraying packets of dissimilar data across digital spaces instead of white paper the culture of diagram broke with the certainties of eighteenth century science to expand the range of human experience speaking across disciplines and discourses bender and marrinan situate our modernity in a new and revealing light
