secret history of the court of england from the accession of george the third to the death of george the fourth volume ii of 2 including among other mysterious death of the imaging and electron physics merges two long running serials advances in electronics and electron physics and advances in optical and electron microscopy this series features extended articles on the physics of electron devices especially semiconductor devices particle optics at high and low energies microlithography image science and digital image processing electromagnetic wave propagation electron microscopy and the computing methods used in all these domains this thematic volume is on the topic of field emission source mechanisms and is authored by kevin jensen naval research laboratory washington dc the close association between blood glucose control and the well being of the patient as well as the risk for the development of the late complications of 3 diabetes make it necessary to attain near normalisation of blood glucosel signifi cant progress has been made in this direction in the last few years because of the advancement of analytical techniques for the monitoring of both metabolic status and the functional state of the pancreas and the kidneys organs involved in the disease process the respective methodologies are the test strips for self monitoring of glucose in blood and urine the measurement of the nonenzymatic glycosylation of hemoglobin and serum proteins the c peptide assay and the determination of small amounts of albumin in urine the test strip methodology for determination of glucose in blood and urine has made possible home blood glucose monitoring which enables the patient to aim for treatment targets near the physiological range to this information on short term glycemia obtained by the patient the determination of hemoglobin glycosylation in the clinical chemistry laboratory adds quantitative information about averaged long term glycemic control the c peptide assay allows evaluation of the residual pancreatic function in the presence of exogenous insulin results of a c peptide assay are helpful in selecting the appropriate treatment for poorly controlled maturity onset diabetes the detection of microalbuminuria an abnormal albumin excretion below the level of albustix detection establishes nephropathy before renal damage becomes irreversible pulsed electromagnetic fields for clinical applications presents the historical development the state of art and the future of the application of pulsed electromagnetic fields pemfs for the treatment of various medical problems including initiating various healing processes from delayed fractures and pain relief to multiple sclerosis and parkinson s disease the emphasis is on the development of scientific methods to be implemented in clinical application in perspective this modality provides a practical exogenous method for inducing cell and tissue modification attempted to the injured tissues to their normal physiological status the book reviews the current state of equipment for pemfs and highlights worldwide therapeutic achievements it explores the past present and future of pemf therapies it presents the development of theory and laboratory research during the last 70 years it reviews the available equipment for pemf it reviews the state of the art of worldwide
