the rate of extinction of biological species is greater today than at any time in the last 65 million years some predict that if this rate continues two thirds of all living species will disappear during the next century because reaching consensus on specific courses of action involves complex issues any adequate response to this impending crisis must include coverage of many areas of inquiry and understanding protection of global biodiversity features essays by distinguished international experts who communicate with each other across disciplinary boundaries to address the challenge of formulating policies to protect biodiversity although the global community has recently adopted a convention of biological diversity the agreement sets forth only abstract goals contributors to this volume advance the convention s initial steps by providing workable solutions that can be implemented regionally nationally and locally the contributors including natural social and political scientists economists lawyers and environmentalists and decisionmakers in business agriculture and government have united to create a common discourse and to evaluate and propose strategies for halting this alarming loss of biodiversity in recognizing the diverse aspects of this task scientific economic institutional moral and legal this book presents a new picture of emerging action contributors s james anaya gregory benford graciela chichilnisky s todd crider yvonne cripps robert t fraley anil k gupta lakshman d guruswamy g m heal brent hendricks robert b horsch laura l jackson annie lovejoy ariel e lugo jeffrey a mcneely brian g norton elinor ostrom peter h raven john w reid walter v reid mark sagoff roger a sedgo r david simpson ana sittenfeld christopher d stone gary h toenniessen

at the rio earth summit in 1992 the nations of the world adopted the convention on biological diversity since then over 160 countries have ratified the convention three conferences of the parties have taken place and a permanent secretariat has been established despite this there remains a lot of uncertainty and even more controversy about what the convention was intended to accomplish and how it was to do so this

book published in association with the iucn the world conservation union sets out to answer some of these questions by recounting the history of the movements leading up to the convention but especially by analysing the forces giving rise to the problem it provides a specific set of policy prescriptions intended to facilitate the development of institutions and obligations within the international community which will give real effect to the aspirations of the convention and the ensure that it has some real effect at ground level the author begins with an overview of the issues and then develops the basic nature of the problems within a bio economic framework he highlights the gaps in the convention which remain to be filled offers detailed explanations of the concepts involved and describes the nature of the solutions required thus he sets out a detailed plan for global action in support of an effective international convention for the conservation of biological diversity the book is an excellent introduction to a very topical debate and a valuable reference point for conservationists policy makers and students of development studies environmental studies environmental policy and conservation biology

Loss of Biological Diversity 1989

the number of species found at a given point on the planet varies by orders of magnitude yet large scale gradients in biodiversity appear to follow some very general patterns little mechanistic theory has been formulated to explain the emergence of observed gradients of biodiversity both on land and in the oceans based on a comprehensive empirical synthesis of global patterns of species diversity and their drivers a theory of global biodiversity develops and applies a new theory that can predict such patterns from few underlying processes the authors show that global patterns of biodiversity fall into four consistent categories according to where species live on land or in coastal pelagic and deep ocean habitats the fact that most species groups from bacteria

to whales appear to follow similar biogeographic patterns of richness within these habitats points toward some underlying structuring principles based on empirical analyses of environmental correlates across these habitats the authors combine aspects of neutral metabolic and niche theory into one unifying framework applying it to model terrestrial and marine realms the authors demonstrate that a relatively simple theory that incorporates temperature and community size as driving variables is able to explain divergent patterns of species richness at a global scale integrating ecological and evolutionary perspectives a theory of global biodiversity yields surprising insights into the fundamental mechanisms that shape the distribution of life on our planet

predictions about the success of the convention on biological diversity cbd are pessimistic it has now become commonplace to bemoan the scope ambition and deeply political nature of a convention that addresses issues ranging from ecosystems protection to the exploitation of genetic resources from conservation to justice and from commerce to scientific knowledge ten years after its adoption how can we assess the difference that the cbd has made is it in danger of collapsing under its own weight or is it building the foundations of new patterns of relations between societies and nature what achievements can we record and what challenges does it face in this book which is unique in its scope diversity and the wealth of information it contains contributors from a variety of academic disciplines tackle an issue of enduring importance to the protection of biodiversity and enhance our understanding of humanity s capacity to reconcile its various aspirations and halt the destructive path upon which it is set

quantitative models are increasingly being used to assess the impact of socioeconomic development pathways on biodiversity and environmental services regardless of the scenario the decline of biodiversity will continue throughout the 21st century land use changes drive biodiversity changes in terrestrial systems while overfishing drives changes in marine systems and climate change affects all realms the loss of habitats will lead to local population decreases and global extinctions will occur at unpredictable rates due to the lag between environmental changes and their effects to address this we need to focus more on the relationship between the decline of ecosystem services and the position of species responsible for that function in the trophic hierarchy perspectives on global biodiversity scenarios and environmental services in the 21st century makes biodiversity scenarios understandable relevant and valuable to stakeholders by using effective language and focused communication techniques instead of merely showing the potential effects of global change on biodiversity scenarios should consider the feedback connecting environmental forces biodiversity provides numerous essential environmental services crucial to human well being both now and in the future the climate is a critical component of ecosystem functioning and directly and indirectly affects human health the target audience includes biology and environmental science students and faculty scientists social workers who generate and collaborate on biodiversity scenarios policymakers and corporations with a basic science understanding

life on earth is wildly diverse but the future of that diversity is now in question through environmentally destructive farming practices ever expanding energy use and the development and homogenization of land human beings are responsible for unprecedented reductions in the variety of life forms around us estimates suggest that species extinctions caused by humans occur at up to 1 000 times the natural rate and that one of every twenty species on the planet could be eradicated by 2060 an ethics of biodiversity argues that these facts should inspire careful reflection and action in christian churches which must learn from earth s vast diversity in order to help conserve the natural and social diversity of our planet bringing scientific data into conversation with theological tradition the book shows that biodiversity is a point of intersection between faith and ethics social justice and environmentalism science and politics global problems and local solutions an ethics of biodiversity offers a set of tools for students environmentalists and people of faith to think critically about how human beings can live with and as part of the variety of life in god s creation

CUET-PG Geography Practice Question Bank Book 3000+ Question Answer As Per Updated Syllabus 2018-12-07

there has been a deluge of material on biodiversity starting from a trickle back in the mid 1980 s however this book is entirely unique in its treatment of the topic it is unique in its meticulously crafted

scientifically informed philosophical examination of the norms and values that are at the heart of discussions about biodiversity and it is unique in its point of view which is the first to comprehensively challenge prevailing views about biodiversity and its value according to those dominant views biodiversity is an extremely good thing so good that it has become the emblem of natural value the book's broader purpose is to use biodiversity as a lens through which to view the nature of natural value it first examines on their own terms the arguments for why biodiversity is supposed to be a good thing this discussion cuts a very broad and detailed swath through the scientific economic and environmental literature it finds all these arguments to be seriously wanting worse these arguments appear to have consequences that should dismay and perplex most environmentalists the book then turns to a deeper analysis of these failures and suggests that they result from posing value questions from within a framework that is inappropriate for nature's value it concludes with a novel suggestion for framing natural value this new proposal avoids the pitfalls of the ones that prevail in the promotion of biodiversity and it exposes the goals of conservation biology restoration biology and the world's largest conservation organizations as badly ill conceived

thanks to advances in electronic archiving of biodiversity data and the digitization of climate and other geophysical data a new era in biogeography functional ecology and evolutionary ecology has begun in data mining for global trends in mountain biodiversity christian korner eva m spehn and a team of experts from the global mountain biodiversity assessment of diversitas explore two of the hottest subjects in science and technology biodiversity and data mining they demonstrate how to harness the scientific power of biological databases for furthering ecological and evolutionary theory expert contributors address two aspects of the global mountain biodiversity assessment they cover how to link biodiversity data with geophysical data and how to use biodiversity data to substantiate evolutionary and ecological theory the text provides different methodological approaches and examples of successful mining of geo-referenced data in mountain regions on various

scales it includes elevational and latitudinal gradients in plant diversity
e mining trends in diversity of lepidoptera beetles and birds niche
modeling to explain past trends and predict future trends in mountain
biodiversity sharing biodiversity data with the global biodiversity
information facility using electronic databases opens ways to manage
biodiversity in a sustainable fashion test evolutionary and ecological
theories and measure the impact of climate change on various species
and its effect on conservation efforts the information and examples
presented in this book can stimulate the creative use of archive data to
answer old questions with new tools and advance knowledge and
understanding of mountain biodiversity worldwide the book highlights
the benefits of and the continuing need for an increase in the amount
and quality of georeferenced data provided online in order to meet the
challenges of global change

from its inception the u s department of the interior has been charged with a conflicting mission one set of statutes demands that the department must develop america s lands that it get our trees water oil and minerals out into the marketplace yet an opposing set of laws orders us to conserve these same resources to preserve them for the long term and to consider the noncommodity values of our public landscape that dichotomy between rapid exploitation and long term protection demands what i see as the most significant policy departure of my tenure in office the use of science interdisciplinary science as the primary basis for land management decisions for more than a century that has not been the case instead we have managed this dichotomy by compartmentalizing the american landscape congress and my predecessors handled resource conflicts by drawing enclosures we ll create a national park here they said and we ll put a wildlife refuge over there simple enough as far as protection goes and outside those protected areas the message was equally simplistic y all come and get it have at it the nature and the pace of the resource extraction was not at issue if you could find it it was yours

this book discusses political controversies involved in global biodiversity policy and the practical opportunities that are opened up in solving them through increased citizen participation and democratic deliberation it examines the emerging practice of deliberative global governance and its political consequences the collection focuses on the intersection of global biodiversity policy and the promise of deliberative democracy in

doing so it examines how new discursive logics emerge in global citizen deliberation that might destabilize the impasses encountered in biodiversity negotiations how a global citizens voice emerges in deliberative processes despite the dominance of national institutions in the lives of those citizens the most effective and innovative ways to amplify the results of large scale deliberations to policy makers and broader audiences and how future citizen deliberations can be designed to make them fair feasible and consequential processes in general and for biodiversity issues in particular this highly original contribution to the field provides theoretical discussions empirical analyses and local experiences of biodiversity policy making it an invaluable resource for students and scholars of environmental politics governance and sociology particularly those interested in deliberative democracy citizen participation and biodiversity

the technical advisory group tag on biodiversity hereafter called biodiversity tag is composed of 25 international experts in ecology biodiversity indicators agronomy life cycle assessment livestock production systems and environmental science their backgrounds

complementary between systems and regions allowed them to understand and address different perspectives the aim of the methodology developed in these guidelines is to introduce a harmonized international approach for assessing the impacts of livestock on biodiversity the livestock sector is a major user of natural resources land in particular and an important contributor to pollution e g causing nutrient losses increasing greenhouse gas emissions which makes it one of the sectors with the highest impact on biodiversity at the same time livestock production is one of the few sectors with not only negative but also positive impacts on biodiversity therefore the sector can pull two levers to improve its biodiversity performance mitigate harm and maximize benefits many environmental assessments of the livestock sector have not addressed biodiversity because of its intrinsic complexity these guidelines strive to include biodiversity in environmental assessments in order to increase the understanding of the impacts of livestock on biodiversity and to reveal possible synergies or trade offs with other environmental criteria or sustainable development goals sdgs several indicators in these guidelines are also of relevance for the un decade on ecosystem restoration
