this book offers a new approach to the history of greek portraiture by focusing on portraits without names comprehensively illustrated it brings together a wide range of evidence that has never before been studied as a group sheila dillon considers the few original bronze and marble portrait statues preserved from the classical and hellenistic periods together with the large number of greek portraits known only through roman copies in focusing on a series of images that have previously been ignored dillon investigates the range of strategies and modes utilized in these portraits to construct their subject s identity her methods undermine two basic tenets of greek portraiture first that is was only in the late hellenistic period under roman influence that greek portraits exhibited a wide range of styles including descriptive realism and second that in most cases one can easily tell a subject s public role that is whether he is a philosopher or an orator from the visual traits used in this portrait the sculptures studied here instead show that the proliferation of portrait styles takes place much earlier in the late classical period and that the identity encoded in these portraits is much more complex and layered than has previously been realized despite the fact that these portraits lack the one feature most prized by scholars of ancient portraiture a name they are evidence of utmost importance for the history of greek portraiture

this book focuses on tullio lombardo s double portrait those mysterious noble reliefs containing busts of young couples whose meaning has long eluded scholars positing their significance as a new genre for private delectation created by a sculptor best known for public and primarily funerary monuments alison luchs sets these and related works against the striking rarity of independent portrait sculpture in venice before the mid sixteenth century among other issues that luchs considers are venetian receptivity to the particularly expressive quality of this genre and the style as it develops in relation to contemporary venetian painting especially that of giorgione and his followers she concludes this richly illustrated study by suggesting that tullio s extraordinary double portrait sculpture played a critical role in preparing a venetian audience for the acceptance of the individualised portrait bust

Early Greek Portraiture 2017-05-03

this book is based on an investigation of more than five hundred recarved portraits it includes analyses of different recarving methods some of which can be attributed to geographically localised workshops the different recarving methods have made it possible to suggest classifiable categories which together underpin a hypothesis that the late antique portrait style is a consequence of the many recarved portraits at the time the practice of portrait recarving emerged due to economic political religious and ideological factors and was influenced by the cultural historical changes of late antiquity the conclusion gives a new understanding of how wide ranging culturally and politically encoded and comprehensive the practice of recarving was

in this book sheila dillon offers the first detailed analysis of the female portrait statue in the greek world from the 4th century bce to the 3rd century ce a major component of greek sculptural production particularly in the hellenistic period female portrait statues are mostly missing from our histories of greek portraiture whereas male portraits tend to stress their subject's distinctiveness through physiognomic individuality portraits of women are more idealized and visually homogeneous in defining their subjects according to normative ideals of beauty rather than notions of corporeal individuality dillon argues that greek portraits of women work differently than those of men and must be approached with different expectations she examines the historical phenomenon of the commemoration of women in portrait statues and explores what these statues can tell us about greek attitudes toward the public display of the female body
