poverty still persists in today's low income countries despite decades of international aid and extensive research on the determinants of growth and development the book argues that meeting this challenge requires a holistic understanding of the context specific factors that influence economic behavior and structures in poor countries contextual development economics approaches this task by offering a methodology that allows analysing the dynamic interrelations between economic cultural and historical determinants of economic life in low income countries the book starts with an empirical inquiry into the economic characteristics of low income countries that create the context by which the specific forms of organising economic activity in these countries are determined it then looks at how different generations of development economists sought to explain economic realities in low income countries from the 1940s through today the book finally synthesises the results from this empirical and methodological analysis with insights from an inquiry into contributions of the german historical school from which it borrows the concept of the economic style as a methodological alternative to the universal and hence often irrelevant models of mainstream development economics this book offers a promising perspective for the future of development economics that will be of interest to researchers and development practitioners alike it will also be relevant for academics and students with an interest in applications of the method and concepts of the historical school to contemporary problems

this edited volume presents a multi perspectival inquiry into the models that have shaped the study of ancient economies in past decades the contributions collected here respond to the prevailing tendency to measure ancient mediterranean economies using methods and techniques designed for assessing the performance of modern economies considering a range of approaches that might generate a more socially and morally attuned history of the ancient mediterranean the volume explores the challenges of quantification and critically examines the ideological assumptions implicit within the models usually applied to the study of ancient economic performance the chapters advocate for more inclusive alternatives to traditional ideas of growth that take factors such as social inequality fairness wellbeing and the relationship between humans and the natural environment into consideration the book examines through

a series of different questions the importance of querying the appropriateness of economic methods from an ethical or socially aware position rather than condemning older models methods and points of view for their inadequacies this book focuses on leveraging the benefits from existing methods in economics and suggesting new frameworks to reach toward historical approaches that are both methodologically sophisticated and attuned to the moral ethical and political concerns of the twenty first century this book will be a valuable resource for interdisciplinary researchers in economics economic history ancient history and archaeology
