A.A.S.A. Official Report, Including a Record of the Annual Convention

1898

terrorism is a cancer an infection an epidemic a plague for more than a century this metaphor has figured insurgent violence as contagion in order to contain its political energies in epidemic empire anjuli fatima raza kolb shows that this trope began in responses to the indian mutiny of 1857 and tracks its tenacious hold through 9 11 and beyond the result is the first book length study to approach the global war on terror from a postcolonial literary perspective raza kolb assembles a diverse archive from colonial india imperial britain french and independent algeria the postcolonial islamic diaspora and the neoimperial united states anchoring her book are studies of four major writers in the colonial postcolonial canon rudyard kipling bram stoker albert camus and salman rushdie across these sources she reveals the tendency to imagine anticolonial rebellion and muslim insurgency specifically as a virulent form of social contagion exposing the long history of this broken but persistent narrative epidemic empire is a major contribution to the rhetorical history of our present moment

Report on the Influenza Epidemic of 1889-90

1891

the plague years mankind has always been fascinated by origins and biologists are no exception darwin is our most famous example what is the origin of mankind of species of infectious diseases in the last few years we have seen the emergence and spread of some apparently new viruses such as hiv 1 and the virus causing bovine spongiform encephalomyelopathy but are these in fact entirely new agents or mutated forms of old viruses that have evolved along with us for eons edgar hope simpson could not have written this book at a more opportune moment he is a firm believer in gradual evolution rather than the sudden arrival of new agents i suspect that he would also have a naturalist s darwinian approach for the origin of aids it has been a source of some amazement to me over the years how even the most innovative scientists conform to a current hypothesis pioneer thinking comes more easily to persons outside the scientific mainstream edgar hope simpson has always struck me as a modem day naturalist of the classic style observant and perhaps a little maverick in line of thought certainly the central hypothesis propounded in this book will be controversial to many scientists from his unique citadel the epidemiological research unit in cirencester he has carefully reexamined mortality data from old records as well as new

Epidemic Empire

2021-02-09

cancers are on the rise across the world except for viral based cancers overall cancers are diseases that may be preventable this book looks at the many levels of determined probable and possible causation for several common cancers these causes include realities found in culture anthropology sociology politics the environment agriculture and food beliefs and the modern lifestyle these realities are filtered through the

perennial science of chinese medicine an ecological system of knowing and understanding the human body as it relates to the world around us the book covers lung colorectal breast prostate and virally caused cancers it interweaves conventional medical knowledge of these cancers with modern realities of everyday life we all live and with chinese medicine interpretations and strategies for treating probable pre cancerous conditions this makes it a book that is useful for the practitioner of chinese medicine it is also useful for the patient suffering a cancer diagnosis in terms of survivorship and for other medical practitioners who wish to understand how integrated care for cancerous diseases and conditions may relate to chinese medicine and prevention the final chapters of the book are dedicated to finding answers for a cure for cancer through making connections between how we live what we believe the environment we are creating based on those beliefs and the social and political mechanisms we now have in place that keep us from change and therefore from the cure for cancer contents water the san jiao air lung cancer earth colorectal cancer yin and qi breast cancer yin and yang prostate cancer fire chronic viral infection and cancer epigenetics the source and the precautionary principle the geology of hope connections readership chinese medicine practitioners and other medical practitioners patients care givers interested lay public keywords cancer prevention chinese medicine integrated cancer care deep ecology

A treatise on the epidemic cholera, as it has prevailed in India

1832

excerpt from observations upon the natural history of epidemic diarrhoea the causative agencies from which springs the plentiful harvest of child mortality in large cities may be conceived as a felted mass of rootlets almost inextricably intertwined those of poverty bad housing bad feeding and neglect may be severally recognized but the extent of their interrelations with actual respiratory and alimentary disease those to which the greater part of the mortality is referred can be traced only with difficulty it is the object of this work to aid in the labour of cutting away the matrix and entangling fibres and to lay bare the hidden ramifications of at least one important causative agency epidemic diarrhoea this affection if we accept provisionally the more novel and generally favoured conception as to its nature is revealed as something very like an ordinary infectious disease and one which permeates all classes while the excessive mortality it gathers round itself in urban centres must be regarded as something superadded owing to the vicious circle it forms with those baneful conditions of slum life mentioned above on the other hand its peculiarly intimate association with the circumstances of domestic life from the continual faecal pollution of the interior of the household by infants and others tends to make it more so than other affections of the kind peculiarly a class disease and an especial scourge of dirty neighbourhoods dirty towns may however be saved from excessive mortality by a high percentage of breast feeding a notable point in the interesting comparison that can be drawn between diarrhoea and typhoid fever is that in accordance with their peculiarly opposite age incidence curves the marked and habitual depositing of infectious excreta within the household in the former disease may make the question of water closet versus conservancy pan a matter of far less importance than in the latter about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Transmission of Epidemic Influenza

2013-11-11

we want to be slim more than anything else in the world so why do we have an obesity epidemic if the solution is as simple as eat less and do more why are 90 of today s children facing a fat future what if the current diet advice is not right what if trying to eat less is making us fatter what if everything we thought we knew about dieting is wrong this is in fact the case this book will de bunk every diet myth there is and change the course of the obesity epidemic this is going to be a ground breaking journey shattering every preconception about dieting and turning current advice upside down did you know that we did a u turn in our diet advice thirty years ago obesity has increased ten fold since coincidence or cause discover why we changed our advice and what is stopping us changing it back discover the involvement of the food industry in our weight loss advice discover how long we have known that eating less and doing more can never work and discover what will work instead there is a way to lose weight and keep it off but the first thing you must do is to throw away everything you think you know about dieting because everything you think you know is actually wrong the diet advice we are being given far from being the cure of the obesity epidemic is in fact the cause

The Geology of the Modern Cancer Epidemic

2013-07-24

five deadly epidemics chiefly typhus and smallpox struck mexico city in the years between 1761 and 1813 claiming a minimum of fifty thousand lives mexico city was at that time the major metropolis of the new world and the capital of new spain by far the richest and most sophisticated city in that vast empire it had the best medicines the best doctors and the best hospitals of the new world what caused these devastating epidemics donald b cooper here makes a thorough study of the problem based almost entirely on unpublished manuscript materials from the national archives of mexico and the municipal archives of mexico city his work represents the first detailed study of the impact of epidemic disease on the history of new spain primarily of its capital the course of each epidemic its inclusive dates the mortality it caused and its effect upon the community are fully described at the time a major epidemic was in progress the author says all levels of government national and local secular and ecclesiastical became involved in varying degrees in providing resources and leadership the church wealthy corporations and private citizens contributed the main funds during the actual time of crisis an outbreak could be prosecuted with remarkable success and cooperation once an epidemic was over however little was done to prevent another no single person or agency in mexico city was sufficiently cognizant of the diverse problems involved to cope with them within a national or regional range not even the viceroy such vital public works as aqueducts waterlines roads and canals were inadequately maintained such essential municipal services as cleaning streets and canals collecting garbage and refuse and caring for the muddy shallow cemeteries were poor if not nonexistent government officials as well as the populace were insufficiently concerned with the relation between sanitation and disease the practice of medicine in eighteenth century mexico had few scientific or professional aspects the close relation of medicine and theology tended to inhibit experimentation that might have effectively broadened the frontiers of medical knowledge traditionalism acted as a barrier to the adoption of innovations in the epidemic of 1779 for instance inoculation which could have saved innumerable lives was totally rejected in the outbreak of 1797 it was accepted only by the small upper class when vaccination came to mexico in 1803 it met the same militant opposition the wonder then is not that so many died of disease but that so many lived

An Essay on the Epidemic Cholera of India

1831

epidemic respiratory disease the pneumonias and other infections of the respiratory tract accompanying influenza and measles by thomas m rivers is an important example of medical literature originally published in 1921 this book covers what was at the time cutting edge research on respiratory illnesses though some of the information contained within this book would be considered outdated by current medical standards it still presents an interesting look at modern medicine of the past thanks to books such as this medical advancements have been able to reach their current states leading to life saving treatments for previously incurable diseases

1898

this book investigates the profound and complex impact of the opioid epidemic on schools in the united states focusing on diverse aspects such as its history legislative responses trends and implications for students educators and schools sharing research from multiple case studies in elementary schools located in northeast opioid crisis regions the book explores the ripple effects of students adverse childhood experiences community and household opioid exposure transiency homelessness attendance as well as the profound struggles of educators dealing with secondary trauma shedding light on the untold stories of young children contending with the consequences of opioid exposure it foregrounds these voices and stories through the unique perspectives of educators additionally the book examines the developing landscape of initiatives to mitigate the crises effects on students emphasizing the need for comprehensive approaches finally the book explores potential interventions and strategies to address the complex issues arising from the opioid epidemic in schools advocating for a comprehensive multi tiered approach involving collaboration among various stakeholders through a synthesis of historical context multiple case studies qualitative follow up investigations and analysis this book provides a comprehensive understanding of the interconnected challenges posed by the overwhelming impact of the opioid epidemic on education in the united states it will appeal to scholars researchers educational leaders school administrators teachers and post graduate students with interests in crises education educational psychology trauma studies public health policy sociology of education and addiction and substance abuse

The Journal of Proceedings and Addresses of the National Educational Association

1898

mapping the epidemic a systemic geography of covid 19 in italy provides a theoretical methodological framework based on space time analysis to map and interpret the set of factors that could have contributed to the spread of covid 19 as well as a reflexive cartographic mapping visualizing the virus s dynamics after an introduction that constitutes the theoretical anchor of the work carried out both with respect to territorial analysis and the use of reflexive cartography the book discusses the role played by reflexive cartography in research on the covid 19 pandemic conducted by an italian university working group dealing with reticularity and the territorial fragilities that have influenced the spread the data subjected to analysis are translated into reflexive cartography as a tool for restitution and investigation of the territorial dynamics each chapter consists of detailed information in which the european context of data analysis is illustrated to then investigate the italian territory and focus on the case of lombardy and in particular of bergamo as the epicenter the book addresses the theoretical and methodological approaches of mapping the epidemic in italy and the importance of cartography in the outbreak response as well as including data accounting for contributing factors such as atmospheric pollution and infection rate population distribution and major mobility corridors and measures adopted to contain the outbreak by implementing mapping at the regional lombard national and european levels mapping the epidemic a systemic geography of covid 19 in italy uses an interdisciplinary approach that highlights the key role of geography and cartography in providing usable data and conclusions on the virus outbreak and will be valuable for researchers and professionals in the fields of geography gis and spatial mapping as well as statisticians working on mapping outbreaks and epidemiological scientists needing mapping data on the virus detail reflexive mapping of the covid pandemic

giving an interpretation that explains the epidemic s variable complexity and visualizes it provides a space time approach based on a database from the beginning of the italian emergence to the decline phase showing the virus spread intensity and speed in relation to socio territorial factors is complementary to studies carried out in the biomedical domain referring to the results of these studies in an original and innovative way envisaged through cybercartography
