contradictory because what they point to is larger than our conceptual frameworks many questions are asked which are not answered anywhere in the book find out what the experience is like to ask yourself these questions even if they leave you emptier of knowledge and understanding in this emptying you just may discover what you are looking for the truth is revealed when we allow ourselves to not know so i invite you to set aside all that you know for the time being and allow yourself to look with innocent eyes at what the words are attempting to unveil take the time to experience the unspoken truth in each section before moving on to the next resist the temptation to read these words with your mind which is likely to rush right past the truth allow the words to sink into your heart and reveal the truth of who you are

the nervous system is the product of biological evolution and is shaped by the interplay between extrinsic factors determining the ecology of animals and by intrinsic processes that dictate the developmental rules that give rise to adult functional structures this special topic is oriented to develop an integrative view from behavior and ecology to neurodevelopmental processes we address questions such as how do sensory systems evolve according to ecological conditions how do neural networks organize to generate adaptive behavior how does cognition and brain connectivity evolve what are the developmental mechanisms that give rise to functional adaptation accordingly the book is divided in three sections i evolution of sensorimotor systems ii cognitive computations and neural circuits and iii development and brain evolution we hope that this initiative will support an interdisciplinary program that addresses the nervous system as a unified organ subject to both functional and developmental constraints where the final outcome results of a compromise between different parameters rather than being the result of several single variables acting independently of each other
