Protocols for High-Speed Networks VI

2013-03-14

1 this year marks the 10 h anniversary of the ifip international workshop on protocols for high speed networks pfnsh it began in may 1989 on a hillside overlooking lake zurich in switzerland and arrives now in salem massachusetts 6 000 kilometers away and 10 years later in its sixth incarnation but still with a waterfront view the atlantic ocean in between it has visited some picturesque views of other lakes and bays of the world palo alto 1990 san francisco bay stockholm 1993 baltic sea vancouver 1994 the strait of georgia and the pacific ocean and sophia antipolis i nice 1996 the mediterranean sea pfnsh is a workshop providing an international forum for the exchange of information on high speed networks it is a relatively small workshop limited to 80 participants or less to encourage lively discussion and the active participation of all attendees a significant component of the workshop is interactive in nature with a long history of significant time reserved for discussions this was enhanced in 1996 by christophe diot and w allid dabbous with the institution of working sessions chaired by an animator who is a distinguished researcher focusing on topical issues of the day these sessions are an audience participation event and are one of the things that makes pfnsh a true working conference

this book provides solid state of the art contributions from both scientists and practitioners working on botnet detection and analysis including botnet economics it presents original theoretical and empirical chapters dealing with both offensive and defensive aspects in this field chapters address fundamental theory current trends and techniques for evading detection as well as practical experiences concerning detection and defensive strategies for the botnet ecosystem and include surveys simulations practical results and case studies

Protocols in Advanced Genomics and Allied Techniques

2021-11-14

this laboratory manual includes the latest tools and techniques involved in genomic research it starts with an introductory

chapter on genomics and the various tools and applications involved the initial chapters present protocols for basic techniques such as dna isolation electrophoresis pcr cdna synthesis etc the book then goes on to describe more advanced techniques such as next generation sequencing exome sequencing use of rnai rnaseq genome editing single cell genomics etc each topic includes a brief description information on the principles involved materials methods protocol and expected results with diagrams and graphs all protocols are presented in a very lucid and precise way to make it easy for readers to follow and replicate them

Mobile Phone Programming

2007-06-25

with a combination of acute observation close analysis and clear headed honesty rebecca giblin leads the reader to share her conclusion that there is no legislative judicial commercial or technical panacea for copyright infringement which p2p software facilitates but that even now it is not too late to improve the manner in which the rights owning and distribution sectors address the challenges that p2p poses jeremy phillips olswang and intellectual property institute uk code wars recounts the legal and technological history of the first decade of the p2p file sharing era focusing on the innovative and anarchic ways in which p2p technologies evolved in response to decisions reached by courts with regard to their predecessors with reference to us uk canadian and australian secondary liability regimes this insightful book develops a compelling new theory to explain why a decade of ostensibly successful litigation failed to reduce the number variety or availability of p2p file sharing applications and highlights ways the law might need to change if it is to have any meaningful

effect in future a genuine interdisciplinary study spanning both the law and information technology fields this book will appeal to intellectual property and technology academics and researchers internationally historians and sociologists studying this fascinating period as well as undergraduate and graduate students who are working on research projects in related fields will also find this book a stimulating read

the experience of networks as the immediate sensing of relations between humans and nonhuman technical elements in assemblages such as viral media and databases today almost every aspect of life for which data exists can be rendered as a network financial data social networks biological ecologies all are visualized in links and nodes lines connecting dots a network visualization of a corporate infrastructure could look remarkably similar to that of a terrorist organization in an aesthesia of networks anna munster argues that this uniformity has flattened our experience of networks as active and relational processes and assemblages she counters the network anaesthesia that results from this pervasive mimesis by reinserting the question of experience or aesthesia into networked culture and aesthetics rather than asking how humans experience computers and networks munster asks how networks experience what operations they perform and undergo to change and produce new forms of experience drawing on william james's radical empiricism she asserts that networked experience is assembled first and foremost through relations which make up its most immediately sensed and perceived aspect munster critically considers a range of contemporary artistic and cultural practices that engage with network technologies and techniques including databases and data mining the domination of search in online activity and the proliferation of viral media through youtube these practices from artists who undermine data to musicians and vjs who use intranetworked audio and video software environments are concerned with the relationality at the core of today's network experience

piracy cultures editorial introduction manuel castells 1 university of southern california gustavo cardoso lisbon university institute iscte iul what are piracy cultures usually we look at media consumption starting from a media industry definition we look at tv radio newspapers games internet and media content in general all departing from the idea that the access to such content is made available through the payment of a license fee or subscription or simply because its either paid or available for free being supported by advertisements or under a freemium business model that is we look at content and the way people interact with it within a given system of thought that sees content and its distribution channels as the product of relationships between media companies organizations and individuals effectively a commercial relationship of a contractual kind with accordant rights and obligations but what if for a moment we turned our attention to the empirical evidence of media consumption practice not just in asia africa and south america but also all over europe and north america all over the world we are witnessing a growing number of people building media relationships outside those institutionalized sets of rules we do not intend to discuss whether we are dealing with legal or illegal practices our launching point for this analysis is that when a very significant proportion of the population is building its mediation through alternative channels of obtaining content such behavior should be studied in order to deepen our knowledge of media cultures because we need a title to characterize those cultures in all their diversity but at the same time in their commonplaceness we propose to call it piracy cultures

in spite of their importance and potential societal impact there is currently no comprehensive source of information about vehicular ad hoc networks vanets cohesively integrating the state of the art in this emerging field vehicular networks from theory to practice elucidates many issues involved in vehicular networking including traffic engineering human factors studies and novel computer science research divided into six broad sections the book begins with an overview of traffic engineering issues such as traffic monitoring and traffic flow modeling it then introduces governmental and industrial efforts in the united states and europe to set standards and perform field tests on the feasibility of vehicular networks after highlighting innovative applications enabled by vehicular networks the book discusses several networking related issues

including routing and localization the following section focuses on simulation which is currently the primary method for evaluating vehicular networking systems the final part explores the extent and impact of driver distraction with in vehicle displays encompassing both introductory and advanced concepts this guide covers the various areas that impact the design of applications for vehicular networks it details key research challenges offers guidance on developing future standards and supplies valuable information on existing experimental studies
