Moving Towards Low Carbon Mobility 2013-01-01

Ôfor a thorough and thoughtful perspective on what it will take to de carbonize cities of the future this book is a must read technology alone we are told will not create the post carbon city as important is coming to grips with a complex web of cultural institutional financial and social factors that

powerfully shape mobility choices now and in the future a balanced holistic approach that reveals how the many elements of contemporary transport systems work together offers the best hope for achieving more sustainable less carbon intensive mobility futures

Robert Cervero University of California Berkeley US

This is not just another book about transport and climate change it sensibly places transport within the much broader concept of mobility and explores all aspects of travel behaviour of people and goods and the infrastructure needs to serve these leading to a balanced set of policy proposals this volume compiled by an internationally eminent team of researchers is essential reading for all those wanting a balanced and objective analysis of this critical topic

Roger Vickerman University of Kent UK

A unique assemblage of papers by top international experts that together cover every aspect of the transport mobility environment relationship

Sir Peter Hall University College London UCL UK

The transport sector has been singularly unsuccessful in becoming low carbon and less resource intensive this book takes an innovative and holistic social cultural and behavioural perspective as well as covering the more conventional economic and technological dimensions to provide a more complete understanding of the mobility and transport system and its progress towards high carbon mobility the book uses this platform to explore the means to achieve low carbon mobility through outlining alternative pathways through an investigation of theories of change and through alternative visions of the low carbon transport city

The book's core message is that the complexity of the mobility and transport system should not encourage inaction but strong and immediate action in addition to implementing a wide range of policy measures the book argues for a fundamental change in thinking when it comes to transport policy governance and analysis approaches before low carbon mobility becomes a reality bringing together the latest thinking on transport mobility and the environment this book will appeal to researchers and students interested in sustainability issues and sustainable transport and transport related areas in particular including policy makers as well as a more general professional audience

the burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities however in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i e social cognition from a detached observer s point of view asking study participants to read out the mental states of others without being engaged in interaction with them consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience more recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant s point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition in order to promote the development of the neuroscientific investigation of online social cognition this frontiers research topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context specifically this research topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds for this research topic we therefore solicit reviews original research articles opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so while focusing on work in the neurosciences this research topic also welcomes contributions in the form of behavioral studies psychophysiological investigations methodological innovations computational approaches developmental and patient studies by focusing on cutting edge research in social neuroscience and related fields this frontiers research topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social

this book presents a proposal to better define thematic relations by exploring the relation between language and cognition it analyzes the relation between grammatically defined roles such as agent and patient semantic roles and elaborate thematic relations etrs actually accessible to language users it shows that many phenomena previously analyzed as grammatical can be described in a more simple and convenient way by postulating direct connection between syntactic complements and cognitive relations present in the schema evoked by the verb the volume focuses on a topic which has been the object of much discussion in the recent literature namely the definition and delimitation of semantic roles proposing new solutions to some important theoretical and practical problems in the description of the lexicogrammatical structure of languages and in particular of verb valency it shows that in

many cases a direct relation can be established between morphosyntactic units and functions on one hand and etrs on the other without the intermediation of grammatically defined semantic roles this makes it possible to analyze thematic relations that have been traditionally problematic such as the patient in a linguistically simple and cognitively well motivated way thematic relations a study in the grammar cognition interface will be a useful resource for practicing linguists working on the analysis of natural languages in particular on verb valency verb subcategorization and thematic structure semantic thematic roles their definition and syntactic coding the relation between grammatical structure and cognitive schemata frames and the structure of the lexicon

the history of modern biblical interpretation is checkered with attempts to rethink and resituate readers theologically and ethically at least two tendencies emerge in these remedial proposals both of which animate this project 1 many accounts privilege either divine action theology or human ecclesial response ethics 2 few proposals have availed themselves of the potential hermeneutical resources of a more extensive biblical theology this study offers a theological and ethical account of christian readers of scripture one that brings together these two apparently divergent poles through the deployment of a biblical theological motif royal priesthood the designation of the people of god as a royal priesthood conditioned and informed by the offices of king and priest carries with it themes that frame the hermeneutical situation in such a way that accounts well for the integral relation of divine agency and ecclesial response theology and ethics
