what is prestressed concrete and how does it work esub May 30 2023 what prestressed concrete designs do is induce stresses throughout the entire structure the end result is a product that better handles vibrations and shocks than conventional concrete in addition this makes it possible to form longer thinner structures that can still handle those heavier loads

detailed analysis of shrinkage and creep effect of concrete Apr 28 2023 prestressed concrete box girder has been widely used in bridges for its advantages of large structural stiffness small deformation and beautiful shape however the inherent performance of concrete as shrinkage and creep has obvious impact on bridge deflection
