with the sharp rise in petroleum prices over the past decade interest has grown in the possible use of plant and tree seed oils as
diesel fuel substitutes or extenders and as chemical feedstocks in both the industrialized and the developing world this book
represents the first attempt to bring together science technology and policy aspects of this topic in one volume the authors

examine the chemical biological and energy related resources available in commercial and wild plant oilseeds the status of chemical processing efforts and of engine tests using agricultural diesel fuels the potential economic environmental and social impacts of more extensive oilseed utilization and current legislation aimed at stimulating commercialization of strategic renewable agricultural resources

the future of mining in south africa is hotly contested wide ranging views from multiple quarters rarely seem to intersect placing emphasis on different questions without engaging in holistic debate this book aims to catalyse change by gathering together fragmented views into unifying conversations it highlights the importance of debating the future of mining in south africa and for reaching consensus in other countries across the mineral dependent globe it covers issues such as the potential of platinum to spur industrialisation land and dispossession on the platinum belt the roles of the state and capital in mineral development mining in the era of the fourth industrial revolution the experiences of women in and affected by mining since the late 19th century and mine worker organising history and lessons and how post mine rehabilitation can be tackled it was inspired not only by an appreciation of south africa s extensive mineral endowments but also by a realisation that while the south african mining industry performs relatively well on many technical indicators its management of broader social issues leaves much to be desired it needs to be deliberated whether the mining industry can play as critical a role going forward as it did in the evolution of the countrys economy
